

PRACTICE 7**Using Cause / Effect Transition Signals for Coherence**

Complete the paragraphs with the transition signals from the box. Capitalize the signals as needed. Use each signal once.

PARAGRAPH 1

~~as a result of~~ because of since so therefore

Active Seniors

Senior citizens can see a big difference in their lives as a result of_{1.} exercise. When they do regular physical activity, their bodies are stronger, so_{2.} they are able to continue to do the things they enjoy without the help of others. In addition, their minds are more active and alert since_{3.} physical exercise is good for the brain. Overall, elderly people who exercise are sick less often. Therefore_{4.}, they need fewer trips to the hospital or the doctor's office. When they do require medical care, they recover more quickly because of_{5.} their exercise program. In short, physical exercise has so many benefits that seniors should be encouraged to stay active.

PARAGRAPH 2

because consequently due to for so

Noise Pollution

The problem of noise pollution in large cities seems to be increasing, so_{1.} it is important to look at its causes. First, a lot of the noise in urban areas is due to_{2.} traffic. A second cause of noise pollution is construction. Because_{3.} the equipment that is used to make and repair buildings and roads is loud, it increases noise levels. Finally, millions of people are crowded into the world's biggest cities. Consequently_{4.}, there is noise from conversation, music, and other sounds of everyday life, including police cars, fire trucks, and ambulances. Moreover, the noise is constant, for_{5.} the activity in cities continues 24 hours a day. In my opinion, urban planners should pay attention to the causes of noise pollution. The problem is just as serious as air pollution and water pollution.

PRACTICE 9**Editing a Paragraph to Correct Sentence Structure**

Find four more errors in sentence structure. Look for fragments, comma splices, and run-ons. Make corrections. For some sentences, there may be more than one possible correction.

The Switch to Online Banking

It is easy to understand why people are changing from their traditional banking to online banking. First, customers decide to manage their money online^b because banks offer them special rewards in return. For example, some banks reduce their fees or give cash back when people change from paper to online services. ^TTherefore, customers eagerly make the switch. Second, online banking is becoming more popular because it saves time. Online customers can use a mobile phone or computer to take care of many of their banking needs, ^{so} they go to the bank less often. As a result of using online services, they do not spend time traveling to the bank or standing in line when they get there. Finally, online banking is safe [^] since many customers fear becoming victims of identity theft. They want to be able to check their account balances regularly from home. They use online banking to make sure their money is still in their account and not in the hands of cyber criminals. Because of factors like these, [^] online banking is on the rise.

RESULT CLAUSES

An **adverb result clause** expresses the effect or consequence of the information in the independent clause. A result clause follows the independent clause in a sentence.

RESULT SUBORDINATORS	EXAMPLES
so + (adjective / adverb) + that	Joanne's cookie business <u>is so successful</u> that she hired three new employees last week. <i>adj</i> <i>So successful is Joanne's business that.....</i> New orders are coming in <u>so rapidly</u> that she has expanded her production facilities. <i>adv</i> <i>So rapidly are new orders coming in that.....</i>
such (a / a[n]) + (noun) + that	Joanne's cookies are <u>such a success</u> that she is considering franchising the business. <i>Such a success are Joanne's cookies that</i>
so much / many + (noun) + that	Running the business takes <u>so much</u> time now that Joanne no longer does the baking herself. <i>uncountable</i> <i>So much time does running the business take that.....</i> There were <u>so many</u> orders for her holiday cookies that her workers were baking 24 hours a day. <i>countable</i> <i>So many orders for....were there that.....</i>
so little / few + (noun) + that	Joanne's employees have <u>so little</u> free time that they are beginning to complain. <i>uncountable</i> <i>So little free time do the employees have that.....</i> Her cookies contain <u>so few</u> calories that even people on diets can enjoy them. <i>countable</i> <i>So few calories do her cookies contain that.....</i>

PRACTICE 5

Using Result Clauses

- A** Combine each pair of sentences using a result clause. Add a comma if necessary. Circle the subordinator. Do not change the order of the clauses.

1. Anthropological museums have realistic displays. A visitor can gain insight into the lifestyles of ancient people.

Anthropological museums have (such) realistic displays (that) a visitor can gain insight into the lifestyles of ancient people.

2. The Ancient Peru exhibit was popular. It was held over for two weeks.

so popular that it was held.....
So popular was the exhibit that.....

3. The artifacts¹ were of historic value. Anthropologists from several universities came to study them.

of such historic value that
Such historic value were the artifacts of that

4. The exhibits were precious. A museum guard was posted in every room.

so precious that...
So precious were the exhibits that.....

To be of value = valuable
To be of importance = to be important

5. Computer graphics allowed the exhibit's curators² to present the lives of ancient Peruvians realistically. You felt you were actually there.

so realistically

So realistically did computer graphics allow...to present... Peruvians that....

6. There were not many exhibits. We were able to see all of them in an hour.

not so many exhibits that/ so few exhibits that.....

Not so many/So few exhibits were there that...

B Complete the sentences in the story with result clauses.

Science museums can be a valuable addition to the education of young people. By visiting these museums, students receive valuable hands-on experience with scientific thinking and can become more motivated to learn. In some cities, science museums are (1) so popular *that schools must make appointments for field trips at least a year in advance.*

Biology classes often visit animal exhibits. At many museums, a curator meets the students and takes them to see exhibits. In one popular snake exhibit, a museum employee sits on a chair with a very large boa constrictor around his neck. He feeds the snake its weekly meal of mice. Sometimes, students are concerned by this demonstration of the circle of life and start shrieking when they see a mouse disappear into the boa constrictor's open jaws. One museum curator reports that, on one visit, the students shrieked (2) so loudly *that the boa constrictor also seemed startled.*

Another museum offers students a chance to hold its largest snake. It is (3) such a large and heavy snake *that many students are frightened do not dare to approach it.* The few students who are brave enough to hold it often comment that its skin is surprisingly dry and smooth.

Other museums invite students to visit the insect room. These rooms often hold an impressive array of different species. One frequently visited museum has (4) so many different *collections that it can take students a whole day just to wonder around.* At the insect exhibits, teachers often assign each student an insect to draw in detail. Sometimes finding the insect can take longer than drawing it. During one recent visit, a student spent (5) so much time trying to find her assigned insect among the millions *of creatures that she skipped her lunch.* By the time the student had found her insect and sketched it, she was starved. In fact, she was (6) so hungry *that she almost passed out.* !
