1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

Today, the use of AI in healthcare is growing significantly. There are several important reasons that can explain this trend. First, AI uses advanced LLM (large learning machine) technology which collects and analyses a vast amount of data from various sources. It interprets medical image and pathology result within a few seconds, helping doctors save time in making diagnoses and reducing the risk of human errors. Many people think AI is used only in treatment but colleges are taking advantage of AI as a powerful tool in teaching and training as well. Thank to its feature of crawling data and creating practical simulation, AI enables learners to examine virtual patients, deal with medical emergencies in their courses. Finally, AI is also integrated in healthcare apps on mobile devices, allowing people to receive notifications to maintain healthy habits or chat with chatbot about common diseases. AI become a indispensable part of daily life even though people don't realise they are using it. In conclusion, AI enhances modern healthcare in remarkable manners from treatment, medical education to daily lifestyle.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

Young people seem to deprioritize healthcare and exercise in busy lives, but it might lead to bad effects for both their physical and mental health. Firstly, when people maintain bad habits without a healthy lifestyle for a long time, it might weaken the immune system. A poor immune system can't help the body defend against viruses. As a result, it's easy to catch communicable or even serious diseases. Secondly, they can't learn productively with a poor health condition, especially in tasks that require a long period of focus and endurance. Some students fall sick before important exams, which affects their academic performance. Finally, many young people consume too much sugar and fast food, which increases the risk of heart disease and diabetes. Besides, being overweight can lead to body shaming and discomfort in their daily activities. In conclusion, ignoring healthcare might cause several harmful effects on health. Understanding these consequences is important to raise awareness and encourage positive changes among teenagers.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

In recent years, people have applied artificial intelligence (AI) in various fields. Widely, AI is being extensively used in healthcare, primarily due to its important benefits. The most obvious advantage is that AI can help diagnose diseases more quickly and accurately. An AI system is trained on thousands of scans to identify tumors or spot disease markers more accurately and efficiently than ever. Therefore, doctors can catch issues sooner and speed up patient care. In addition, AI can analyze patients' data and enhance personalized treatment plans. Instead of having both doctors and patients wait for months to determine the effectiveness of a certain drug, these models can direct them toward more effective treatment. From that, patients can save both time and money. Finally, AI helps reduce the workload for medical staff through automation. This means doctors can save time and be freed up to focus more on patient care. In conclusion, AI's role in healthcare is becoming increasingly important and should be perfected along with human skills.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

These days, a noticeable trend has emerged: teenagers are paying less and less attention to their healthcare. This shift will definitely lead to some damaging effects. Firstly, the unconcern about their health, obviously evidenced by unhealthy lifestyles(such as poor diet, lack of physical activity, insufficient sleep), can result in delayed diagnosis and treatment of health issues. For example, drinking too much bubble tea may increase your risk of diabetes and obesity, or lack of physical activity can weaken muscles and slow metabolism. Additionally, the lack of proper health attention in teenagers can negatively impact long-term mental well-being overtime. As a result, teenagers may have to face stress, anxiety, and depression, which are considered serious medical and mental health conditions. It can be hard to function at school, with friends, or with family. Indeed, we should raise awareness about healthcare among teenagers to build comprehensive development for them.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

AI is being extensively used in healthcare because it brings many useful benefits. First, AI can analyze medical data quickly and accurately. This helps doctors detect diseases early and give better treatment to patients. AI is also used to read medical images such as X-rays and test results. As a result, doctors can work faster and reduce mistakes. Second, AI helps hospitals save time and manage work more easily. It can store patient records, manage appointments, and support online health services. AI can also help patients monitor their health at home, such as by checking heart rate or sleep. In conclusion, AI improves the quality of healthcare. It makes medical services safer, faster, and more effective for both doctors and patients.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

Nowadays, poor habits have a strong negative effect on the health of young people. First, many teenagers eat too much fast food and drink a lot of soft drinks. They also stay up late and do not get enough sleep. As a result, they often feel tired and weak. Moreover, many young people spend too much time on mobile phones and computers instead of doing exercise. This can cause overweight and other serious health problems such as stomach issues, heart disease, or diabetes. In addition, these bad habits also affect mental health. Teenagers may feel stressed and anxious and find it hard to concentrate on their studies. Because of this, their school performance becomes worse. If this unhealthy lifestyle continues, the problems may last into adulthood. In conclusion, paying little attention to healthcare can lead to many negative effects on both the physical and mental health of young people.

07:42 Ngày 13 tháng 12 năm 2025**1. Write a paragraph of around 150 words to respond to the following question:***"Why is AI (Artificial Intelligence) being extensively used in healthcare?"***Your Answer:** **off-topic**

One important trend today is using AI for medical purposes of healthcare systems, and it has become more widespread in recent years. The topic is critical because of its several effects. One positive effect is that Artificial Intelligence helps enhance patient care, which is worth considering because it can replace human in some tasks, improve diagnosis, and reduce human error. Because Artificial Intelligence can manage large datasets, AI can analyze medical images quickly. This lead to enhance accuracy in disease diagnosis and increase the mistake of people. Another noticeable impact is that Artificial Intelligence can manage huge data, and this can bring about it is extensively used in drug discovery. So that AI helps speed up research rapid, and this bring about patients are treated earlier, reduce the cost of treatment. In conclusion, it is clear that AI being extensively used in healthcare has several important effects, and it necessary for people to understand these consequences in order to develop AI perfectly.

2. Write a paragraph of around 150 words to respond to the following question:*"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"***Your Answer:** **Too many grammatical mistakes**

One important trend today is teenagers are paying less and less attention to healthcare these days, and it has become more widespread in recent years. The topic is critical because of its several effects on both individuals and society. The first effect is that Lack of awareness about diet can lead to long-term problems like the increased risk of obesity. Many teenagers usually consume a large number of junk food because they are very convenient. But this is not good for their health. Another noticeable impact is that a sedentary lifestyle and sleep deprivation can cause serious mental and physical health issues. Adolescents are not good on control their schedule, so they tend to go to bed late. This cause sleep deprivation, even sleep disorders. In addition, many teenagers usually sit on screen in many continuously hours and don't do exercises. So they can a risk of having many diseases such as cardiovascular diseases, diabetes, digestive diseases... In conclusion, it is clear that lack of awareness about health care of teenagers has several important effects, and it necessary for people to understand these consequences in order to parents and schools can help by teaching them preventive measures.

12:18 Ngày 12 tháng 12 năm 2025**1. Write a paragraph of around 150 words to respond to the following question:***"Why is AI (Artificial Intelligence) being extensively used in healthcare?"***Your Answer:**

One important issue today is the extensive use of AI in healthcare, which has become increasingly widespread and advanced in recent years. This topic is critical because of its several effects on both patients and medical systems. The first effect is that AI can improve diagnostic accuracy, which is worth considering because it helps doctors detect diseases earlier and more reliably. For example, AI-powered imaging tools can identify small abnormalities that humans may miss. Another noticeable impact is that AI can save time for medical staff, and this can lead to faster treatment decisions. For instance, AI systems can quickly analyze large amounts of medical data within seconds. The final consequence is that AI can enhance patient care, which shows that the technology can influence both doctors and patients in different ways. To be specific, AI supports personalized treatment plans and continuous health monitoring. In conclusion, it is clear that AI in healthcare has several important effects, and it is necessary for people to understand these consequences to use it responsibly.

2. Write a paragraph of around 150 words to respond to the following question:*"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"***Your Answer:**

One important trend today is the decreasing attention teenagers pay to healthcare, and it has become more serious and widespread in recent years. This topic is critical because of its several effects on both individuals and society. The first effect is that teenagers may develop weaker physical health, which is worth considering because poor habits can harm their long-term well-being. For example, many teens choose fast food and skip regular check-ups. Another noticeable impact is that this trend can lead to reduced communication with parents or doctors, and this can lead to a less accurate understanding of their own health. For instance, some teenagers ignore symptoms and rely on quick online answers instead of seeking proper medical advice. The final consequence of this trend is lower motivation to maintain healthy routines, which shows that it can influence teenagers' lifestyle choices in different ways. To be specific, they may have fewer chances for developing good self-care skills. In conclusion, it is clear that this trend has several important effects, and it is necessary for people to understand these consequences in order to promote healthier habits among teenagers.

Lâm Thị Thanh Thúy
12:05 Ngày 12 tháng 12 năm 2025

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

The application of AI in healthcare involves using artificial intelligence to support the diagnosis, treatment, and management of diseases, thereby improving healthcare efficiency.

AI technology can analyze medical data, predict diseases, optimize treatment processes, and personalize therapies for each patient. As the result, AI not only improves the quality of healthcare service but also reduces the burden on doctors and the healthcare system.

Why is AI in healthcare an inevitable trend? Some key reasons explaining this trend include:

First, the explosion of medical data and the need for digitalization: the enormous amount of medical data requires powerful analytical tools like AI to optimize information storage and retrieval.

Second, the shortage of healthcare personnel and the need to optimize processes: AI helps reduce the workload for healthcare staff, optimize processes, and improve patient care efficiency.

Third, AI technology helps reduce errors and improve treatment effectiveness: AI analyzes patient data to detect patterns and trends, improving accuracy in diagnosis and treatment.

Finally, strong investment from technology corporations and healthcare startups: Large companies and startups are investing heavily in AI in healthcare, driving the development and widespread application of this technology.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

First, teenagers may face more health problems. They often eat fast food, drink sugary drinks, and do not exercise enough. As a result, they can become overweight or feel tired easily. Some teenagers may even develop long-term illnesses when they grow older.

Second, a lack of attention to healthcare can affect their school performance. When teenagers do not sleep well or do not have a healthy lifestyle, they cannot focus in class. They may get sick more often and miss important lessons.

Finally, this trend can lead to unhealthy habits in the future. If teenagers do not learn how to take care of themselves now, it will be difficult for them to change their lifestyle when they become adults.

In conclusion, teenagers' low attention to healthcare can harm both their physical health and their studies. Families, schools, and communities should encourage young people to build healthy habits early in life.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)**Long**
13:16 Ngày 13 tháng 12 năm 2025**1. Write a paragraph of around 150 words to respond to the following question:***"Why is AI (Artificial Intelligence) being extensively used in healthcare?"***Your Answer:**

Why is AI being extensively used in healthcare?

Nowadays, AI is being extensively used in healthcare. There are several important reasons that can explain this trend. The first cause is diagnose diseases. That mean AI help doctor detect health problems easily and quickly and more accurately. For example, in the past, doctor need to check X-ray or MRI image carefully to analysis. With AI visions have ability to analyze images like X-ray or MRI and give result after a few seconds. And doctors just check the result to figure out diseases and medical treatment. Another important reason is that healthcare systems develop and train their AI chatbot to provide better their services. Everyone can ask Chat AI directly before go if they have any problem. Furthermore, that also help doctor focus on harder patients instead of spend time on all. In conclusion, AI being extensively use in healthcare is caused by several factors and it will be continue.

2. Write a paragraph of around 150 words to respond to the following question:*"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"***Your Answer:**

Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

One important trend today is the extensive use of AI in healthcare, and it has become increasingly widespread in hospitals in recent years. This topic is critical because it has several effects on both patients and the medical system. The first effect is that AI helps doctors diagnose diseases more accurately, which is worth considering because early and correct diagnosis can save lives. In particular, the U.S. Food and Drug Administration (FDA) has approved and authorized many AI-based tools for medical diagnosis, especially in areas such as medical imaging and disease detection. For example, an AI tool developed by VinBigdata (VinDr) has been approved by the FDA to analyze breast X-ray images in order to detect suspicious signs of breast cancer. This system can automatically classify mammography scans and help identify abnormalities at an early stage. Another noticeable impact is that AI reduces the workload of medical staff, which can lead to better patient care and less stress for doctors. For instance, AI chatbots are able to answer basic questions from patients, allowing doctors to save time and focus on more serious cases. In conclusion, it is clear that AI is being widely used in healthcare for several important reasons, and it is necessary for people to understand these effects in order to use AI responsibly.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

One important issue today is that many teenagers are paying less and less attention to healthcare, and this trend has become increasingly worrying in recent years. This problem is important because it has several negative effects on young people as well as society. The first effect is that teenagers may develop health problems at an early age, which is concerning because these issues can influence their physical development and future well-being. For example, unhealthy eating habits and a lack of exercise can easily lead to obesity. Another noticeable impact is that their academic performance may decline, and this can result in poor concentration and low productivity at school. For instance, teenagers who do not get enough sleep often find it difficult to focus during lessons. The final consequence is that this trend may put extra pressure on the healthcare system, which shows that the issue affects not only individuals but also families and hospitals. In conclusion, teenagers' lack of attention to healthcare has several serious effects, and it is necessary to understand these consequences in order to promote healthier lifestyles among young people.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

One important trend today is AI being extensively used in healthcare, and it has become more widespread in recent years. This topic is critical because of its several effects on both individuals and society. The first effect is that AI helps doctors remotely monitor their patients' health, which is worth considering because it can collect patient data to enable quicker medical intervention and improve the quality of healthcare. For example, patients who have hypertension can use a blood pressure monitor to control their blood pressure. If their blood pressure is high, they will take medicine or see the doctors. Another noticeable impact is that AI's ability to reduce medical errors in electronic health records can enhance patient safety and prevent deaths. For instance, when a doctor enters a new prescription into an electronic health records system, AI immediately checks the patient's existing medication list and allergy history, so the doctor can find the best medicine to treat the patient. In conclusion, it is clear that this trend has several important effects, and it is necessary for people to understand these consequences of AI being extensively used in healthcare.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

One important trend today is that teenagers are paying less and less attention to healthcare these days, and it has become more widespread in recent years. This topic is critical because of its several effects on both individuals and society. The first effect is that many teenagers, due to neglecting their health, often fail to recognize symptoms until it is too late, which is worth considering because the delay means they miss the best time for treatment. For example, a teenager who had just felt tired for a long time went to see a doctor and was diagnosed with end-stage renal failure. Another noticeable impact is that they can more easily have obesity. Nowadays, teenagers develop unhealthy habits like eating too much fast food, which causes this disease. For instance, a lot of teenagers order food delivery instead of having a healthy meal with their parents. In conclusion, it is clear that this trend has several important effects, and it is necessary for people to understand that teenagers are paying less and less attention to healthcare these days.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

Here is a well-organized 200-word essay for topic 2, following your ideas and adding clear examples:

2. Teenagers Are Paying Less Attention to Healthcare

Nowadays, many teenagers are paying less and less attention to their health, and this trend has several negative effects. The first impact is physical. When teenagers ignore healthy habits, they often feel tired and get sick easily, which affects their studies. Today, young people spend too much time on their phones and social media. They stay up late, eat fast food, consume too many sweet snacks, and rarely exercise. Over time, these habits can lead to fatigue, stress, and a lack of concentration in both schoolwork and daily activities. For example, a student who sleeps only four to five hours a night may struggle to focus in class and perform poorly in exams.

The second negative effect is emotional and mental health. Poor lifestyle choices can cause anxiety, mood swings, and even depression. For instance, teenagers who spend excessive time online may compare themselves to others and feel insecure about their appearance or abilities. This can damage their self-esteem and reduce their motivation to participate in real-life activities or build healthy relationships.

In conclusion, paying less attention to healthcare can harm teenagers both physically and mentally. Therefore, it is important for them to develop healthier habits to improve their overall well-being and future success.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

In conclusion, paying less attention to healthcare can harm teenagers both physically and mentally. Therefore, it is important for them to develop healthier habits to improve their overall well-being and future success.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

Nowadays, AI is being used more and more in healthcare, and there are several important reasons for this trend. The first reason is that AI helps doctors make faster and more accurate diagnoses. AI can analyze a large amount of medical data, such as X-rays, MRI scans, and blood test results, much quicker than humans. This allows doctors to detect diseases earlier and give better treatment. For example, AI systems can help identify early signs of cancer that may be difficult for the human eye to notice. Early detection increases the chances of successful treatment. The second reason is that AI improves efficiency in hospitals. Many tasks such as scheduling appointments, managing patient records, or monitoring patients can be done automatically by AI. This reduces the workload for doctors and nurses, allowing them to spend more time caring for patients. For instance, AI chatbots can answer basic questions from patients, helping hospitals save time and resources.

In conclusion, AI is widely used in healthcare because it improves accuracy and increases efficiency. With its powerful abilities, AI is helping the healthcare system become faster, smarter, and more effective.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

Teenagers Are Paying Less Attention to Their Health

Nowadays, many teenagers are paying less attention to their health, and this trend leads to several negative effects. The first effect is poor physical health. Teenagers often spend too much time on their phones, stay up late, eat fast food, and rarely exercise. These unhealthy habits make them feel tired and easily get sick, which affects their learning. For example, a student who sleeps very late every night may feel sleepy in class and cannot focus on lessons, leading to lower academic performance. The second effect is mental and emotional problems. When teenagers lack healthy routines, they can become stressed or anxious. Spending too much time on social media also causes them to compare themselves with others, making them feel insecure. For instance, some teenagers may feel sad or lose confidence because they think they are not as good as people they see online. In conclusion, paying little attention to health brings many problems. Teenagers should build healthier habits to improve both their body and mind.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

One important issue today is the extensive use of artificial intelligence in healthcare, and it has become more widespread in recent years. This is important because it helps both doctors and patients. The first effect is that AI can support doctors make better decisions. For example, AI can analyze medical information and give suggestions, so doctors can diagnose diseases more quickly. Another noticeable impact is that AI enables personalized treatment for patients, and this can lead to better health outcomes. In conclusion, the use of AI in healthcare has important effects, especially in supporting medical decisions and personalizing treatment, which contributes to improving the overall quality of healthcare services.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

One important issue today is that teenagers are paying less and less attention to healthcare, and it has become more widespread in recent years. This topic is critical because it has several effects on both individuals and society. The first effect is that teenagers' physical health declines, which is worth considering because many of them have unhealthy eating habits and poor lifestyles. For example, they often eat fast food and drink soft drinks, and they do not like doing exercise. As a result, their bodies become weak and overweight. Another noticeable impact is that this trend can harm teenagers' mental health, and this can lead to stress and frequent anger. For instance, they spend a lot of time on electronic devices and often stay up late, which makes them feel tired and lose concentration. The final consequence of this issue is a decline in academic performance, which shows that the issue can influence students' learning abilities in different ways. To be specific, unhealthy students often find it difficult to focus in class and get poor grades. In conclusion, it is clear that teenagers' lack of attention to healthcare has several serious effects, and it is necessary for people to understand these consequences in order to encourage a healthier lifestyle among young people.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

Artificial intelligence is being used more and more in healthcare because it can help doctors work faster and more accurately. AI systems can quickly analyse large amounts of medical data, such as X-ray images or blood test results, and point out problems that humans might miss. This helps doctors make better decisions and diagnose diseases earlier. In addition, AI reduces the workload for medical staff by handling simple tasks like scheduling appointments or reminding patients to take their medicine. It can also predict health risks by studying a person's medical history, which allows hospitals to provide treatment before the condition becomes serious. Furthermore, AI supports research by processing information from thousands of studies in a short time. Overall, AI improves efficiency, saves time, and increases the quality of patient care, which is why it is becoming so important in the healthcare industry.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

these day, many teenagers do not pay enough attention to their health , and this can cause several problems. First, many young people have unhealthy habits such as eating fast food, sleeping late, and not doing exercise. Because of this , they may become tired easily of gain to much weight. some teenagers also get sick more often because their bodies are not strong. In addition their menal health can be affected when they spend too much time in phones or social media, they can feel stressed or anxious. Another problem is that bad habits from a young age can continue when they become adults, making their future health worse. therefore, it is impportent for teenagers to learn about good nutritions, hygiene, and regular check ups. Paying attention to healthcare can help them live healthier and happier lives in the future.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)**Nguyễn Minh Loan**
19:58 Ngày 10 tháng 12 năm 2025**1. Write a paragraph of around 150 words to respond to the following question:***"Why is AI (Artificial Intelligence) being extensively used in healthcare?"***Your Answer:**

Today, AI (Artificial Intelligence) tools are being extensively used in healthcare. There are several important reasons that can explain this trend. The first reason is AI can analyze medical images rapidly and accurately. This feature assists doctors in making quicker and more accurate diagnoses. It is really significant in detecting diseases earlier, especially for dangerous illnesses like cancer. AI also helps in personalizing treatment plans for each patient which depends on their data. Another important reason is that AI algorithms help to optimize hospital workflows. This leads to improved efficiency, reduced administrative burden, and offers a path to lower healthcare costs in the long run. Finally, AI can process vast amounts of patient data quickly. This capability is crucial for predictive analytics, the discovery of new drugs, and therapies in the future. In conclusion, AI represents a significant advancement and an important role in the healthcare field. Hospitals should apply AI as much as they can to benefit both doctors and patients.

2. Write a paragraph of around 150 words to respond to the following question:*"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"***Your Answer:**

One important issue today is that teenagers are paying less and less attention to healthcare, and it has become more serious in recent years. This topic is critical because of its several negative effects on both individuals and society. Firstly, this issue leads to many negative physical and mental health effects. Teenagers often maintain some bad habits or lifestyles which are harmful to their health. For example, doing less exercise causes a rise in obesity rates, spending extensive time on laptops and smartphones leads to a higher risk of developing chronic diseases, and poor eating habits leave them with nutritional deficiencies. Furthermore, studying under pressure and lack of sleep significantly impact their mental health. This neglect can result in increased stress and anxiety, which then affects their concentration and academic performance. Another noticeable impact is that this behavior leads to unhealthy habits for adulthood and puts a strain on the future healthcare system to treat their health problems. In conclusion, it is clear that a significant increase in health problems and healthcare system occurs when teenagers increasingly neglect their health. It is essential to raise teenagers' awareness about this issue.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

Artificial Intelligence (AI) is being used extensively in healthcare for several important reasons. Firstly, AI is highly effective at analyzing medical data quickly and accurately. For example, it can analyze X-rays, scans, and test results faster than humans, which helps doctors make quicker and more reliable diagnoses. Secondly, AI plays a crucial role in developing new medicines. Specifically, it can analyze complex data to identify potential drug targets and design new compounds more quickly and effectively than traditional methods. Finally, AI improves patient care and support. Systems like AI chatbots can continuously monitor medical records, provide health consultations, and offer immediate customer support, making healthcare services more accessible and efficient. Therefore, because of its speed, accuracy, and versatility, AI has become an essential and indispensable tool in modern healthcare.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

Teenagers are paying less and less attention to healthcare these days, which leads to several severe consequences. First, the convenience of modern life encourages unhealthy eating habits. For example, the availability of numerous restaurants, coffee shops, and online food delivery services makes it incredibly easy for students to order what they need. Although this saves them time, it also creates bad habits and promotes laziness. Secondly, excessive screen time replaces physical activities. Teenagers are constantly using computers, which limits their engagement in outdoor activities. While these devices offer benefits for studies, the negative side is that students often spend a lot of time on digital entertainment, such as playing games or using social media. Consequently, they spend less time playing sports, which can lead to various health problems. In conclusion, these negative trends significantly affect teenagers' health. Therefore, schools and parents should actively encourage and educate children to use fewer computers and enjoy more outdoor activities to enhance their physical and mental well-being.

08:12 Ngày 13 tháng 12 năm 2025**1. Write a paragraph of around 150 words to respond to the following question:***"Why is AI (Artificial Intelligence) being extensively used in healthcare?"***Your Answer:**

One important trend today is using AI in the healthcare field, and it has become more extensive in recent years. This topic is critical because of its several effects on both individuals and society. The first effect is that AI will act as a tool that save significant amount of personal time. For example, AI-powered tools manage automating routine tasks such as appointment scheduling, billing or AI chatbots, which helps patient avoid waiting in line for hours. Another noticeable impact is better diagnoses with deep learning. To be specific, AI tools help analyzing medical images, patient data faster and detect disease accurately. Also, all treatments and wellness plans are personalized-made to reduce the curing time. In conclusion, it is clear that AI-driven support plays an important role and has several effects in medical field, and it is necessary for people to understand these positive consequences in order to utilize AI's advantages.

2. Write a paragraph of around 150 words to respond to the following question:*"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"***Your Answer:**

One important issue today is the the lack of attention to healthcare among teenagers, and it has become more serious in recent years. This topic is critical because of its several effects on both individuals and society. The first effect is that poor healthcare habits can severely damage both physical and mental well-being. For instance, many teenagers skip meals and sleep irregularly, which leads to problems such as obesity, low energy, stress and anxiety. Overtime, these habits can negatively affect their academic performance and personal relationships. Another consequence of this issue is the dependence on medical support. To be specific, when a large number of young people grow up with health issues, the future workforce will become less productive and more dependent on medical support. In conclusion, it is clear that when teenagers pay less attention to healthcare, it will affect both individuals and society, and it is necessary for the young to early learn about health education and be supported by stronger medical system.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)**Nguyễn Thị Thuỳ Trang**
13:47 Ngày 13 tháng 12 năm 2025**1. Write a paragraph of around 150 words to respond to the following question:***"Why is AI (Artificial Intelligence) being extensively used in healthcare?"***Your Answer:**

AI is being widely used in healthcare nowadays for several important reasons. First, it helps doctors diagnose diseases more accurately and quickly. For example, AI can analyze medical images such as X-rays or scans and detect problems that may be missed by humans. This helps save time and reduce the risk of misdiagnosis, which can lead to serious problems for patients. Second, AI improves efficiency in hospitals by automating routine tasks such as scheduling appointments, managing medical records, and organizing patient data. As a result, doctors and nurses can spend less time on paperwork and more time caring for patients. In addition, AI can help monitor patients' health conditions and predict potential risks. This allows patients to receive treatment at an earlier stage, which can improve recovery rates. Overall, it is clear that AI brings several critical benefits for both patients and the healthcare system. Therefore, it should be applied more widely in the future.

2. Write a paragraph of around 150 words to respond to the following question:*"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"***Your Answer:**

Teenagers paying less attention to healthcare has become a widespread trend in modern society. This trend has several negative consequences that need to be carefully discussed. One major effect is the increasing risk of health problems among young people, such as obesity, eating disorders, poor eyesight, high blood pressure, and depression. These issues are often caused by unhealthy diets, lack of physical exercise, and too much screen time. If these habits continue, the problems may become more serious in the future and develop into long-term health conditions. Another negative effect is higher healthcare costs. When teenagers get sick more often, they have to spend more money on doctor visits, medicines, or even long-term treatment. This poor state of health can place financial pressure on both teenagers and their families. In addition, a lack of attention to healthcare can reduce teenagers' quality of life. Teenagers who feel unwell may find it difficult to focus at school since their conditions affect their memory retention and concentration. Also, because they are always tired, they can not finish their daily tasks, consequently, they do not have time to enjoy their hobbies. In conclusion, ignoring healthcare during adolescence can lead to long-lasting and harmful effects.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

Today, AI is being extensively used in healthcare. There are several important reasons that can explain this trend. The first cause is AI's ability to read and understand medical information quickly. This means that doctors can find health problems earlier. For example, AI can read X-ray or MRI images promptly and accurately. Another important reason is that AI helps hospitals save time and money. This happens because medical machines can do many tasks and give accurate results, which helps reduce the workload for hospital staff. Moreover, AI systems check patients' symptoms faster and suggest the most suitable treatment. Finally, AI helps doctors work more effectively. One clear example is AI chatbots that answer simple medical questions or provide new medical knowledge. This leads to doctors having more time for patients and taking care of them more carefully. To sum up, people use AI in healthcare because it brings many benefits. It makes work faster and more convenient and helps doctors and patients. In the future, AI will become even more useful as technology continues to improve.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

Today, many teenagers are paying less and less attention to healthcare. There are several important effects of this trend. The first effect is that teenagers may have more problems with physical health. This means that they can easily become tired or even get sick. For example, many young people skip meals, do not eat on time, or eat too much fast food, which is not good for health and can lead to obesity or cardiovascular diseases. Another important effect is that their mental health can become worse. This happens because they spend too much time on their phones or social media, and they go to bed overnight. For instance, many teens feel stressed or lonely, although they live with their family. Finally, a lack of attention to healthcare can affect a youth's future life. One clear example is that unhealthy teens often do work and study ineffectively. To sum up, teenagers' carelessness about their health causes many problems, and it will continue to get worse unless they change their lifestyle.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)**Nguyễn Thị Yến Nhi**
12:41 Ngày 13 tháng 12 năm 2025**1. Write a paragraph of around 150 words to respond to the following question:***"Why is AI (Artificial Intelligence) being extensively used in healthcare?"***Your Answer:**

Artificial intelligence is being widely used in healthcare because it improves diagnosis and supports doctors in treatment. First of all, AI helps increase the accuracy of medical diagnosis. It can analyze medical images such as X-rays, CT scans, and MRI results faster and more accurately than humans in some cases. As a result, diseases can be detected earlier, which improves patients' chances of recovery. In addition, AI plays an important role in supporting doctors during treatment. By analyzing large amounts of medical data and patients' medical histories, AI can suggest suitable treatment plans. This helps doctors make better decisions and reduce the risk of mistakes. However, AI does not replace doctors; it only assists them in their work. Therefore, the use of AI in healthcare helps improve the quality of medical services and patient care.

2. Write a paragraph of around 150 words to respond to the following question:*"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"***Your Answer:**

Nowadays, many teenagers pay less attention to their healthcare, and this trend has several negative effects. Firstly, their physical health may become worse. Teenagers often eat fast food, spend too much time using electronic devices, and do not exercise regularly. As a result, they can suffer from problems such as obesity, tiredness, and weak immune systems. Secondly, ignoring healthcare also affects teenagers' mental health. They may feel stressed, anxious, or even depressed because they do not have enough rest or healthy ways to relax. Pressure from schoolwork and social media can make these problems more serious. Over time, poor physical and mental health can reduce teenagers' quality of life. Therefore, it is important for young people to care more about their health from an early age.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

AI is being extensively used in healthcare because it offers many important advantages. First, AI can monitor, analyze, and assess health information quickly and clearly. This helps patients understand their medical test results more easily and allows doctors to detect problems earlier. Second, AI greatly improves efficiency in hospitals. It can arrange appointments and provide fast services, which reduces waiting time and helps hospitals operate more smoothly. Third, AI is able to analyze large amounts of medical data and identify patterns that humans may miss. This supports early diagnosis and better treatment decisions. In conclusion, AI has become a valuable tool in healthcare because of several reasons above, that supports both patients and medical staff.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

Teenagers nowadays are paying less and less attention to healthcare, which is a serious problem and can cause several negative effects on both teenagers and their families. First, there are many kinds of junk food available today. If teenagers do not care about their health, they may choose food simply because they like it, even when it is unhealthy. Second, modern life is very busy, and only a few teenagers pay attention to doing exercise, which can lead to problems in both their physical and mental health. They will not have good health to study or enjoy life. Finally, when teenagers do not care about healthcare, they lack the knowledge needed to take care of their family members. When someone in the family has a health problem, teenagers may feel nervous and may not know how to help. In conclusion, teenagers' lack of attention to healthcare can lead to several negative effects on their families and society.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

One important trend today is using AI as a study support tool among students, and it has become more widespread in recent years. This topic is critical because of its several effects on both individuals and society.

The first effect is that students are able to study more efficiently with the support from artificial intelligence. AI provides quick answers and clear explanations so that students can improve their understanding of the topic they are learning or even widen their knowledge with correct prompt questions. For example, NotebookLM is a common AI tool that students use a lot nowadays, which can go through students' notes and suggest questions, ideas, or areas they might want to explore.

Another noticeable impact is that students are likely to overuse AI and become dependent on AI. This means they have fewer chances to think independently and practice problem-solving skills. As a result, they might struggle to perform well on tasks that require independent thinking, such as taking tests or presenting a project in front of the class.

Clearly, AI can be a helpful learning tool for students, but it also has some considerable negative effects. It is necessary for young learners to understand the consequences in order to use it wisely.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

One important issue today is the carelessness of teenagers toward their healthcare, and it has become more serious in recent years. This problem can lead to the following effects.

First of all, because the children lack awareness about taking care of their health, they tend to collect unhealthy habits, such as staying up late at night, skipping meals, and spending time on screens instead of exercising. As a result, teenager study results and daily performance at school will be influenced.

Second, ignoring healthcare for a long time can affect the teenager's physical and mental health. For example, if children do not get enough sleep over a long period, their sleep deficiency can be linked to heart disease, diabetes, and depression.

The final consequence of this issue is the financial cost they have to pay for their own health problems in the future. The expense for treating serious illness can be a burden not only on individuals but also on society.

In conclusion, it is clear that when teenagers do not pay attention to their healthcare, it can lead to many negative consequences. Therefore, it is necessary to raise awareness among teenagers to help them develop healthier lifestyles and avoid these problems.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

One important trend today is the use of AI in healthcare. It is becoming more and more common. There are several reasons for this. Firstly, AI can increase efficiency and reduce the workload for medical staff. Many simple administrative tasks can be done by AI, such as giving instructions, answering patients' questions, and offering support 24/7. AI can process information very fast, often in less than one minute, while humans may need much more time.

Secondly, AI helps doctors make better treatment plans. It can analyze patient data and suggest options that fit each person's condition. Finally, AI can improve diagnostic accuracy. It helps detect diseases earlier, reduces mistakes, and reads medical images like X-rays and MRI scans more quickly. In conclusion, because of these advantages, I believe that AI will continue to become more common in our healthcare systems.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

Nowadays, thanks to the development of technology, young people have more and more things to pay attention to. Therefore, they seem to have less time to take care of their health, and as a result, they suffer from various negative effects. Firstly, their physical health may decline. Poor diet and lack of exercise can lead to obesity, which increases the risk of diabetes and cardiovascular diseases in the future. Secondly, poor oral health is also a common problem. Neglecting brushing and flossing can cause cavities and gum disease. In addition, lack of sleep or excessive use of electronic devices affects sleep quality and can slow down healthy development. Finally, mental and emotional health can be seriously affected. Problems such as depression and anxiety may go unnoticed and untreated. Some young people may even develop negative coping behaviors, such as substance use or self-harm. In the long term, these issues can create unhealthy habits that are hard to change in adulthood. They also increase the risk of chronic diseases and reduce overall quality of life. In conclusion, there are many drawbacks when young people do not pay enough attention to their health.

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

Today, AI is becoming an essential part of healthcare. There are several important reasons that can explain this trend. First of all, AI can do a very good job in storing, organizing, and managing data. When medical records and administrative tasks are done by AI, it not only helps hospitals save time for doctors and nurses, but also avoids human errors. Another reason is that AI is a useful automated assistant at hospitals. For example, in the US, there are robots named Moxi and RoBear that support nurses by carrying supplies and delivering medicine. AI helps reduce workload and improve efficiency in daily operations. Last but not least, using AI in healthcare is an effective way to reduce costs. When simple and repetitive work is done by AI, hospitals can reduce unnecessary spending, which leads to cost reduction and makes healthcare more affordable. In conclusion, it is clear that AI greatly improves the quality of healthcare while reducing costs for both hospitals and patients.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

One important trend is that teenagers are increasingly paying less attention to healthcare, and this has become more serious in recent years. This topic is critical because of its several effects on both individuals and society. First of all, ignoring healthcare can lead to both short-term and long-term consequences for individuals. Unhealthy lifestyle choices, like lack of sleep or poor diet, can lead to lower energy, reduced productivity and increased stress in the short term. In the long term, it can lead to many more serious health problems and diseases, which may cause higher medical costs and a shorter lifespan. Another serious effect is that unhealthy teens will become unhealthy adults, and society will suffer. More unhealthy adults mean workforce productivity decreases and the healthcare system becomes overloaded, which can affect public budgets. In conclusion, it is clear that paying less attention to healthcare has several effects, and it is necessary for people to understand these consequences in order to avoid them and live a happy and healthy life.

22:13 Ngày 12 tháng 12 năm 2025

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

AI is being extensively used in healthcare mainly because it can improve efficiency in data processing and help address the growing demand for medical services. Modern healthcare systems generate vast amounts of information, such as patient records, test results, and medical images, which are difficult for humans to analyse quickly and accurately. AI technologies are able to process this data, identify patterns, and support doctors in making more precise diagnoses, thereby reducing the risk of human error. In addition, the demand for healthcare is increasing across all age groups due to factors such as environmental pollution and emerging diseases, placing significant pressure on hospitals and medical staff. In this context, AI applications can provide basic guidance for common or minor symptoms, helping patients feel less anxious and better informed. As a result, healthcare systems can operate more efficiently, allowing medical professionals to focus on serious and urgent cases.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

The fact that teenagers are paying less attention to healthcare can lead to several negative consequences for both individuals and society. One major effect is the increased risk of long-term health problems, as unhealthy habits formed during adolescence, such as poor diet, lack of exercise, and insufficient sleep, often continue into adulthood. As a result, teenagers may become more vulnerable to issues like obesity, stress-related disorders, and weakened immunity at a young age. In addition, neglecting healthcare can negatively affect teenagers' academic performance and daily functioning, since physical and mental health problems often reduce concentration, motivation, and energy levels. On a broader level, this trend may place greater pressure on healthcare systems in the future, as a generation with poor health awareness is more likely to require medical treatment later in life. Overall, ignoring healthcare during teenage years can have lasting and far-reaching effects.

DEC HANU THT1 WRITING REVISION FOR PROGRESS TEST (TXA 25-1-HN3)

1. Write a paragraph of around 150 words to respond to the following question:

"Why is AI (Artificial Intelligence) being extensively used in healthcare?"

Your Answer:

AI is widely used in healthcare because it brings many important benefits. The most obvious reason is that AI can analyze medical data very quickly. This helps doctors diagnose diseases more accurately. As a result, doctors can save a lot of time and reduce mistakes during treatment. For example, many hospitals use AI to read X-ray or MRI images, and the system can detect small problems that humans might miss. Another noticeable advantage is that AI supports the early detection of serious illnesses, such as cancer and heart disease. When the disease is found early, patients have a higher chance of successful treatment. In addition, AI improves the quality of healthcare services. Nowadays, some hospitals use AI in patient care because it enables personalized treatment for each patient by studying their health records and suggesting the best medicine for their body. In conclusion, AI plays an important role in modern healthcare, and it will continue to grow and help improve healthcare services in the future.

2. Write a paragraph of around 150 words to respond to the following question:

"Teenagers are paying less and less attention to healthcare these days. What are the effects of this trend?"

Your Answer:

In my opinion, when teenagers pay less attention to their healthcare, it can lead to several negative effects. The obvious consequence is that many young people may have poor physical and mental health. A great number of teenagers develop unhealthy habits, such as eating too much fast food, sleeping late, or not doing enough exercise. These habits can cause problems like weight gain, stress, or low energy. This trend can also increase mental health problems, such as anxiety or depression, because a weak lifestyle often affects both the body and the mind. Another effect is that teenagers may face more long-term health issues in the future. For example, if they ignore regular check-ups, they might not notice early signs of illnesses, and this can make the condition worse later. In addition, poor health can affect their academic performance because they may find it hard to concentrate or feel tired during class. In conclusion, paying less attention to healthcare can have serious consequences for teenagers now and in the future.
