

SPEAKING

UNIT 7

Lecturer: Quynh Trang, MA.

PRONUNCIATION

CONSONANTS /t/ AND /d/

/t/

PRONUNCIATION Dropped Consonants

 Consonant clusters can be hard to pronounce. To make them easier to say, we often omit, or leave out, certain consonant sounds. Two common examples are the /d/ sound in words that end with *-nds* and the /t/ sound in words that end with *-cts* or *-nts*:

diamonds /daɪˈmændz/
effects /əˈfɛks/

friends /frɛnz/
events /əˈvɛnz/

hands /hændz/
facts /fæks/

sounds /saʊnz/
prints /prɪnz/

- 
1. My parent~~s~~ are history teachers.
 2. It's so cold. My hand~~s~~ are freezing!
 3. Think about all the fact~~s~~ before you decide.
 4. Are your friend~~s~~ coming to dinner?
 5. People felt the effect~~s~~ of the flood for years.
 6. During the winter, they spend most weekend~~s~~ skiing.
 7. One person count~~s~~ while the other person hides.

- 
8. Hold on! It will only take a few more second~~s~~.
 9. Do you follow the latest fashion trend~~s~~?
 10. How many tent~~s~~ do you think we'll need?

SPEAKING SKILL

SPEAKING SKILL Using Transitions

addition	_____	example	_____	reason	_____
condition	_____	purpose	_____	result	_____

and ■ consequently, ■ and so ■ since ■ for instance, ■ because ■ in order to
therefore, ■ if ■ furthermore, ■ as a result, ■ for example,

- Addition: and, furthermore
- Condition: if
- Example: for instance, for example
- Purpose: in order to
- Reason: because, since
- Result: consequently, and so, therefore, as a result

SPEAKING SKILL Use Linking Words

Linking words show relationships between ideas. We use them in several ways, including to:

Add information: Furthermore, ... In addition,, too
Earthquakes can be dangerous. Floods can be deadly, **too**.

Show contrast: However, ... On the other hand, ... In contrast, ...
Earthquakes can be dangerous. **However**, serious quakes are rare.

Give an example: For example,, for instance, such as ...
Earthquakes can be dangerous. The 1755 Lisbon quake, **for instance**, killed up to 50,000.

B Complete the sentences with linking words from the skill box. The punctuation will help you decide which ones are appropriate. In some cases, more than one answer is possible.

1. Earth science is a popular major. _____ **However,** _____, it's not as popular as business or health science.
2. Ontario, Canada, has many beautiful natural places, _____ **such as** _____ Niagara Falls and Algonquin Provincial Park.
3. Earthquakes are common in Japan. _____ **In addition / Furthermore** _____, the country regularly experiences major storms called typhoons.
4. On the one hand, farmers need rain to help crops grow.
_____ **On the other hand,** _____, too much rain can cause dangerous floods.
5. China is one of the largest countries in the world. Brazil and India are both large,
_____ **too** _____.

Many cities in the world have now become very overcrowded. People are migrating in from the countryside in search of work. Infrastructure, water supplies, public transport cannot cope with the demands from increased numbers of people. They are under severe strain. We need to encourage the creation of jobs outside the cities. The governments could encourage certain businesses to set up branches in rural areas.

- Many cities in the world have now become very overcrowded **since** people are migrating in from the countryside in search of work.
- **As a result,** infrastructure **such as** water supplies **and** public transport cannot cope with the demands from increased numbers of people, **consequently,** they are under severe strain.
- **One solution might be** to encourage the creation of jobs outside the cities.
- **For example,** the governments could encourage certain businesses to set up branches in rural areas.

SPEAKING

UNIT 7: OUR CHANGING WORLD

Lecturer: Quynh Trang, MA.

Have you experienced any unusual or extreme weather where you live?

Yes, there has been strange weather here like strangely heavy rain, it caused flooding in a large area. Yagi was Asia's strongest typhoon in 2024. Because of it, too much rain flooded Hanoi, people didn't expect it to be so bad. Many vehicles and homes were under water. Because streets were flooded, many businesses were closed and people could not go out easily, too. I believe such experiences show how climate change is affecting the weather in my area.

Unusual weather patterns in Hanoi are evident, for instance, downpours deviating from the norm causing widespread flooding. During the historic flood year of 2024, Hanoi faced unprecedented heavy rainfall unleashed by the typhoon Yagi, Asia's most violent typhoon that year, leading to severe urban flooding that submerged numerous vehicles and homes. In addition, the streets turned into rivers, disrupting daily commutes and forcing many businesses to close temporarily. I believe such experiences underscore the growing influence of climate change on local weather patterns.

Flood /flʌd/

Wildfire/ Forest fire /'fɔːrɪst/ /'faɪə(r)/

Tsunami /tsu:'na:mi/

Tornado /tɔ:'neɪdʊ/

Photo by Brad Goddard

Drought /draʊt/

Hurricane

/ˈhʌrɪkən/ - /ˈhʌrɪkeɪn/ - /ˈhɜːrəkeɪn/

Hail /heɪl/

Landslide /'ləndslaɪd/

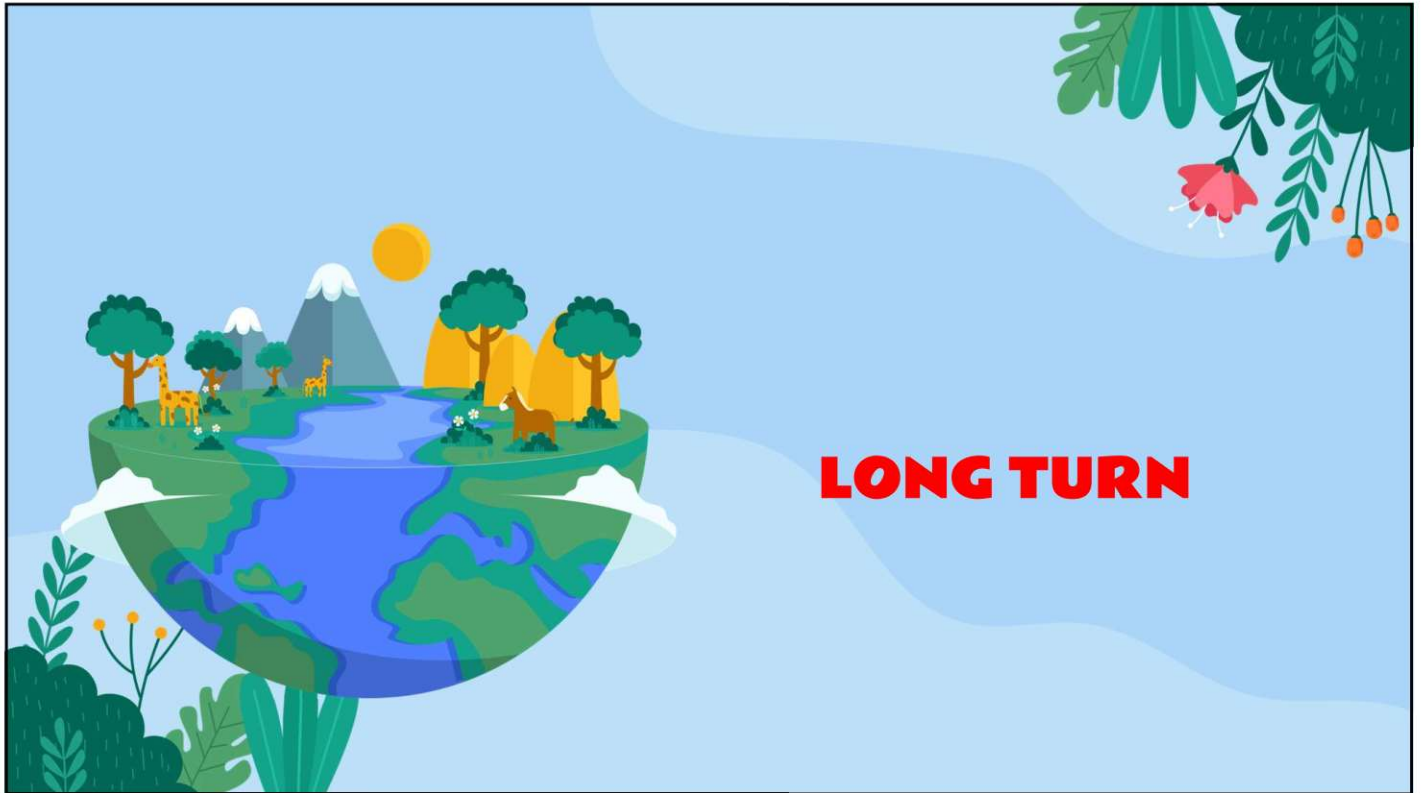

Avalanche /'ævələ:ntʃ/
= **Snowslide** /'snəʊslaid/

Extreme heat/ Heatwave /'hi:t,weɪv/

Describe a natural disaster that has become more destructive.

You should say

- What it is
- Where it often occurs
- Why it has become more destructive

And explain how its impact can be reduced.

(1) affect more people worldwide than any other disaster, and their (2), social, and environmental impacts are (3)ing. By 2050, the cost of flooding is projected to rise by (4) dollars. (5), through changes in (6), storms, and (6), along with land use and floodplain development, increases flood (7). Hard engineering methods, for instance, dams and seawalls, are usually considered (8) but costly, in(9), and environmentally harmful solutions. However, (10) solutions, such as restoring wetlands, can (11) water, (12) disaster risk, and improve water (13). Wetlands also provide other great (14), for example, (15) effects and (16) opportunities like fishing, boating, bird watching, and walking paths.

Floods affect more people worldwide than any other disaster, and their **economic**, social, and environmental impacts are **worsening**. By 2050, the cost of flooding is projected to rise by **11 billion** dollars. **Climate change**, through changes in **rainfall**, storms, and **temperatures**, along with land use and floodplain development, increases flood **risk**. Hard engineering methods, for instance, dams and seawalls, are usually considered **default** but costly, **inflexible**, and environmentally harmful solutions. However, **nature-based** solutions, such as restoring wetlands, can **absorb** water, **reduce** disaster risk, and improve water **quality**. Wetlands also provide other great **benefits**, for example, **cooling** effects and **recreational** opportunities like fishing, boating, bird watching, and walking paths.
