UNIT 9

Lecturer: Quynh Trang, MA.

PRONUNCIATION

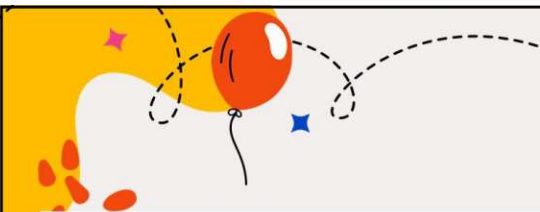

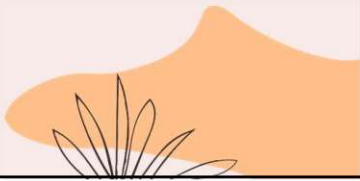

PRONUNCIATION Thought Groups

 We divide the words we say into thought groups. These are words or ideas that naturally go together, such as phrases, clauses, or even short sentences. After each thought group, we usually pause briefly. And the last content word of each thought group is usually stressed.

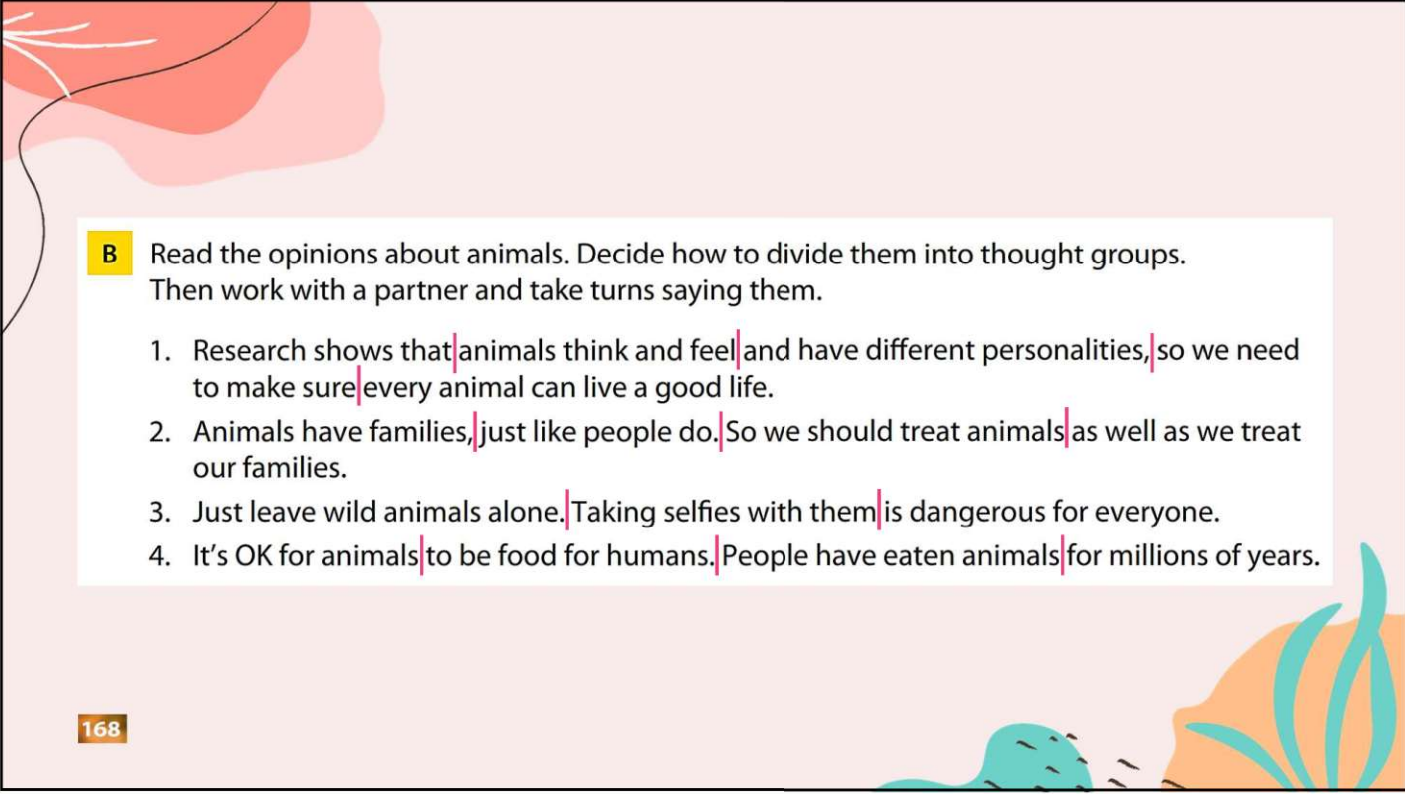

*Like Lucy **Cooke**, / Explorer Joel **Sartore** / also became interested in **animals** / as a **child**.*

168

 3.23 Listen to each statement, and put a slash (/) at the end of each thought group you hear. Then practice saying the sentences with a partner. Use thought groups.

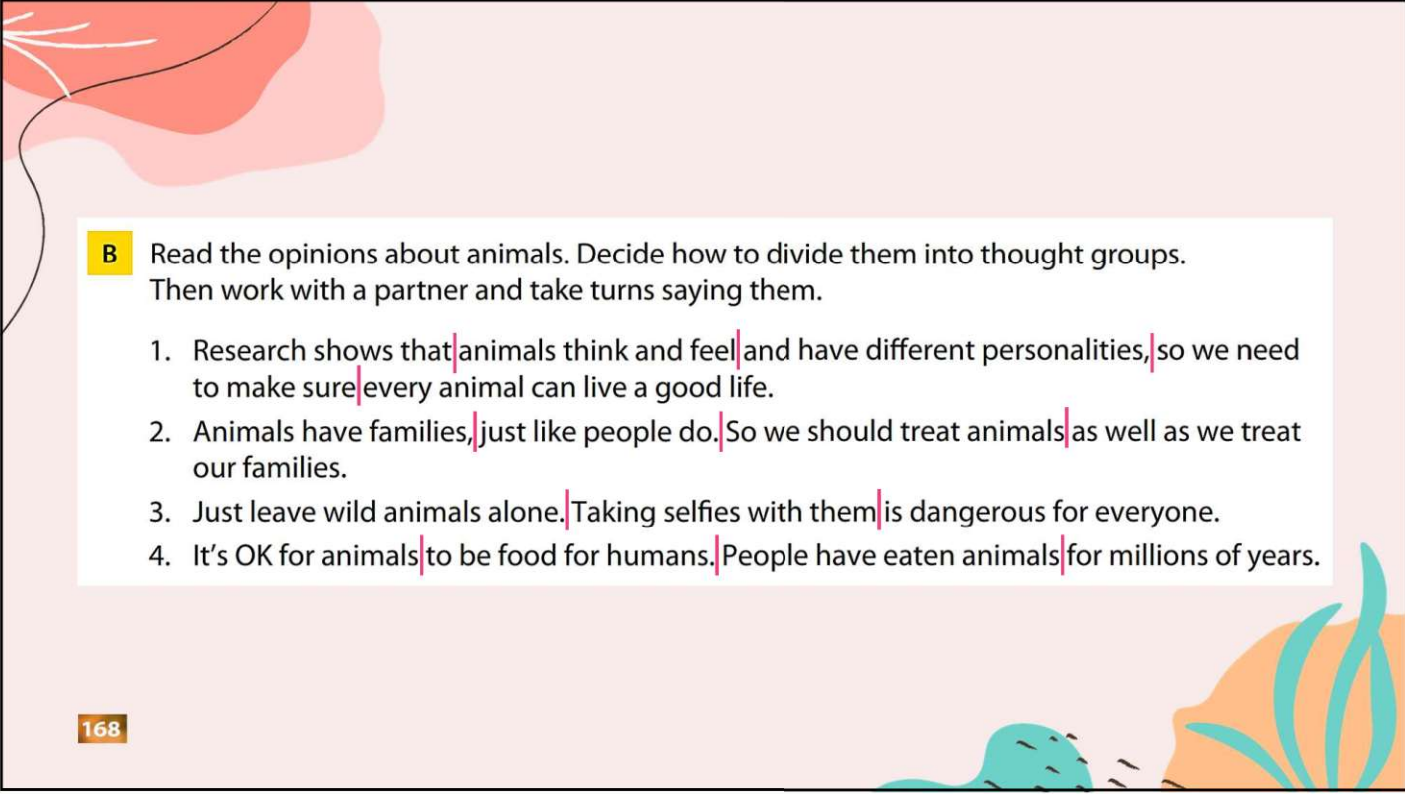

1. My best friend started her own company|about five years ago|right after college.
 2. Her son wants to study business|and then work at a bank.
 3. Running a successful business is not easy|because you work a lot|and have to take risks.
 4. I got a job|at the new café|on Main Street.
 5. If you work hard|and treat people well|you'll be successful.
 6. After work|I usually take a walk|so I can relax|and get some exercise.
- 

B Read the opinions about animals. Decide how to divide them into thought groups. Then work with a partner and take turns saying them.

1. Research shows that animals think and feel and have different personalities, so we need to make sure every animal can live a good life.
2. Animals have families, just like people do. So we should treat animals as well as we treat our families.
3. Just leave wild animals alone. Taking selfies with them is dangerous for everyone.
4. It's OK for animals to be food for humans. People have eaten animals for millions of years.

168

SPEAKING SKILL

SPEAKING SKILL Express Cause and Effect

Causes are the reasons why something happens. Effects are the results of an event or situation.

To introduce a cause, use expressions like *because*, *since*, or *the reason is (that)*:

*Elephants will probably not go extinct. Why? **Because** they're very popular.*

To introduce an effect, use expressions like *so*, *as a result*, *therefore*, or *as a consequence*.

*Elephants are very popular. **Therefore**, they will probably not go extinct.*

You can also use an *if* clause to show a cause-effect relationship.

***If** animals are not protected, they may become endangered.*

169

E Underline the expressions that introduce causes or effects. Then say the sentences using natural thought groups.

1. Giraffes can eat leaves that are up high. The reason is that they have long necks.
2. Colors can help birds find a partner, so male birds of some species are very colorful.
3. Their light fur makes polar bears hard to notice. As a result, they can catch food easily.
4. Chameleons can be hard to see because they can change the color of their skin.
5. If glaciers keep melting, polar bears will lose their habitat.

SPEAKING

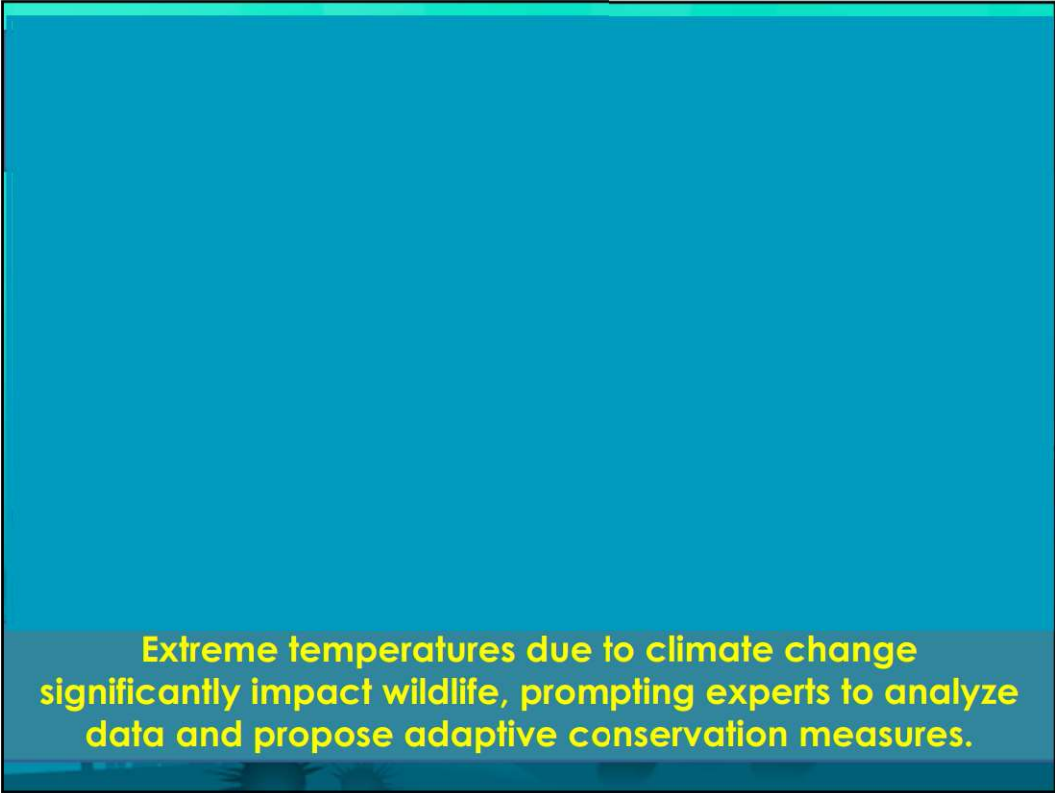

UNIT 9: SPECIES SURVIVAL

Lecturer: Quynh Trang, MA.

As endangered species are classified, it is crucial to recommend practical strategies to combat poaching effectively.

Lecturer: Quynh Trang, MA.

The romantic allure of pristine forests inspires the local community to support initiatives preserving its natural beauty.

Extreme temperatures due to climate change significantly impact wildlife, prompting experts to analyze data and propose adaptive conservation measures.

Lecturer: Quynh Trang, MA.

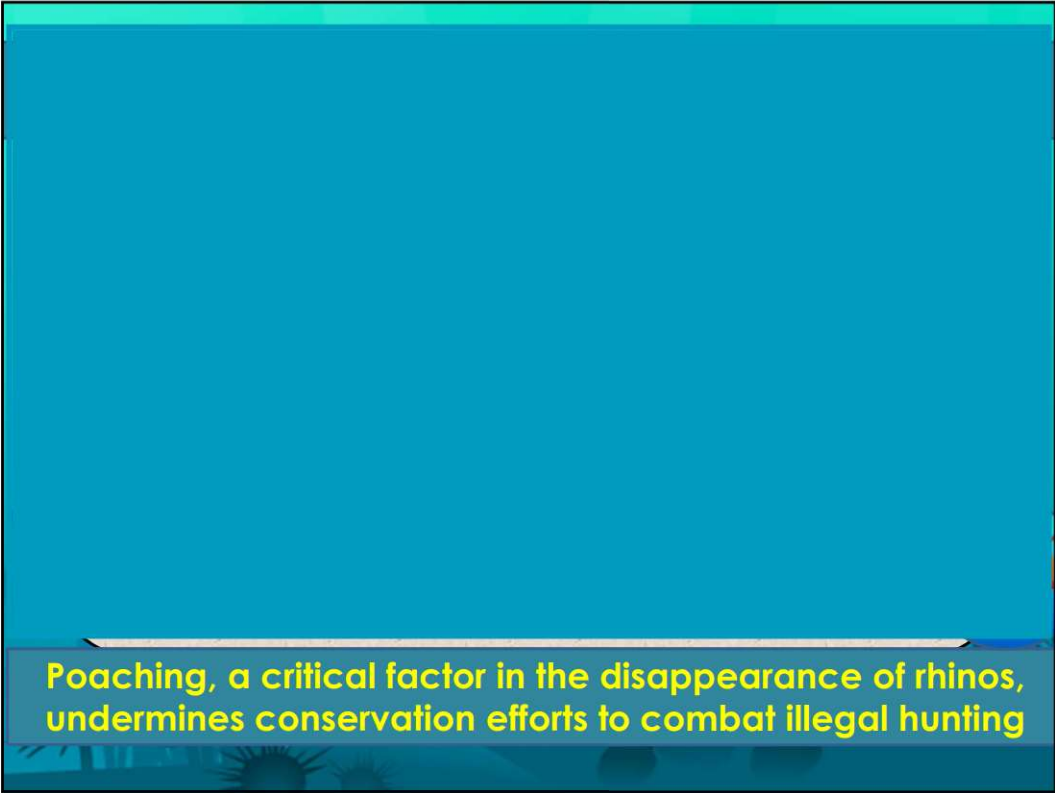

The disappearance of wetlands, a critical factor in declining biodiversity, alarms conservationists who advocate for practical restoration projects.

In the dry season, the available water sources dwindle, leading local communities to classify critical wetlands and support initiatives that prevent biodiversity from harm.

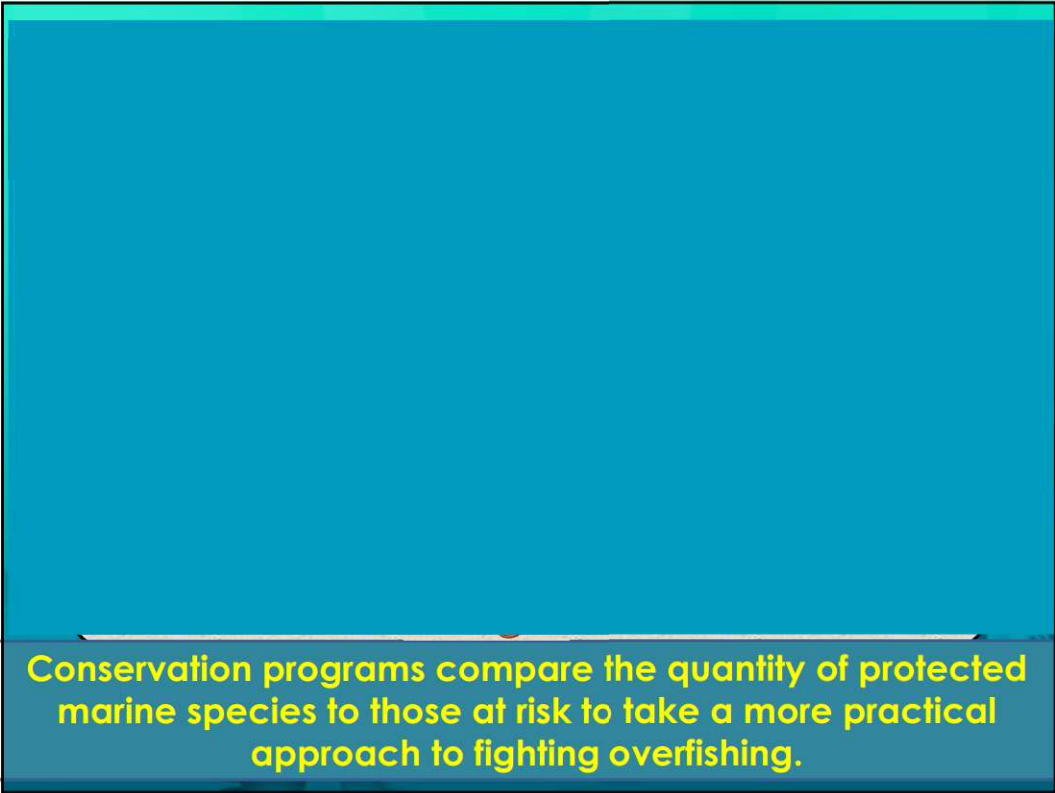

Lecturer: Quynh Trang, MA.

The proportion of forests disappearing due to illegal logging alarms conservationists who feel the urge to analyze local policies, and recommend practical measures to restore the serene atmosphere of wildlife habitats.

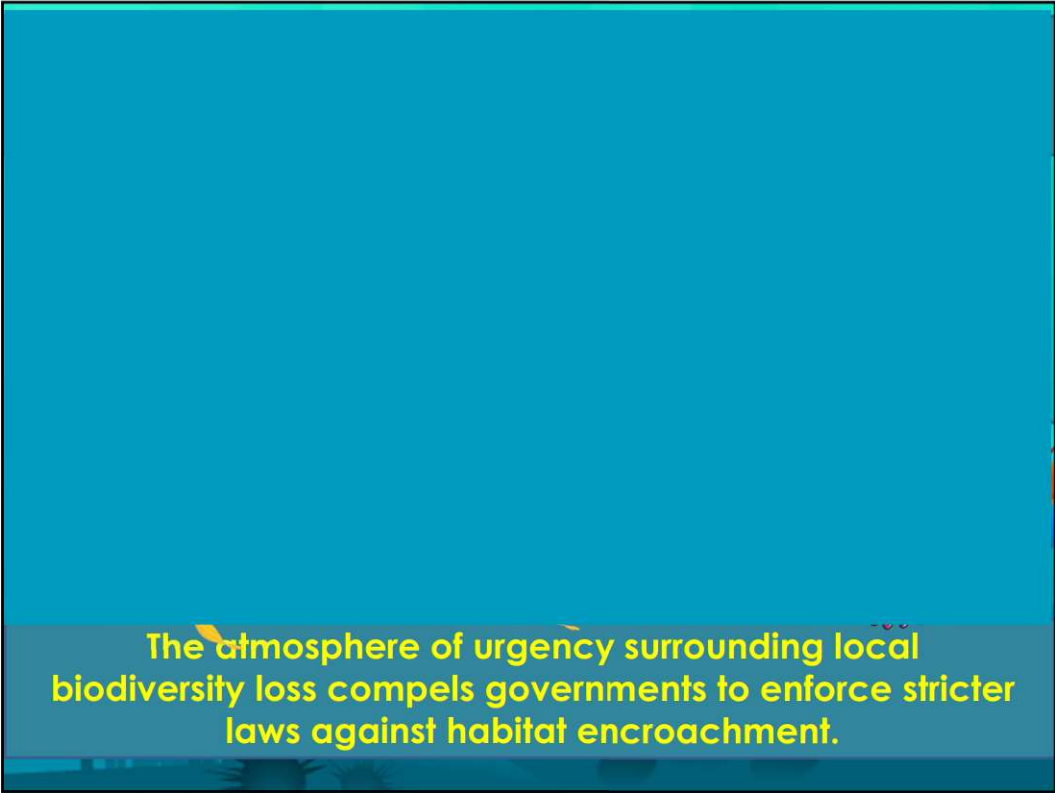

Poaching, a critical factor in the disappearance of rhinos, undermines conservation efforts to combat illegal hunting

Lecturer: Quynh Trang, MA.

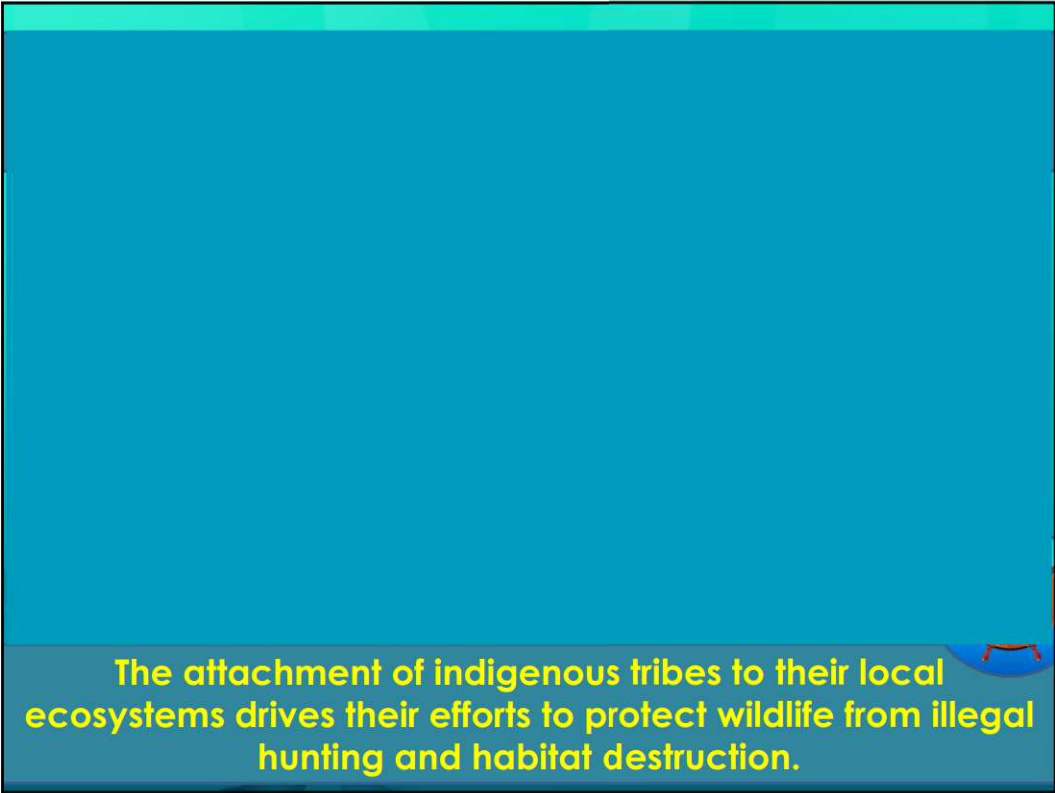

Conservation programs compare the quantity of protected marine species to those at risk to take a more practical approach to fighting overfishing.

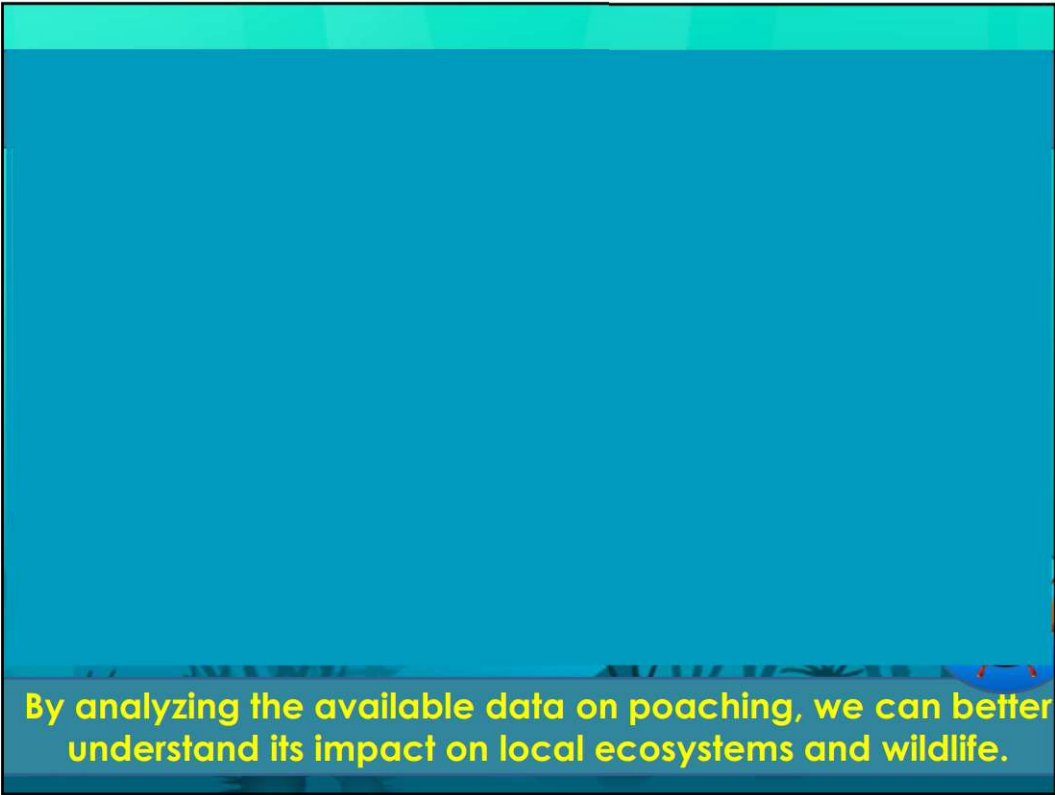

The atmosphere of urgency surrounding local biodiversity loss compels governments to enforce stricter laws against habitat encroachment.

Lecturer: Quynh Trang, MA.

The attachment of indigenous tribes to their local ecosystems drives their efforts to protect wildlife from illegal hunting and habitat destruction.

By analyzing the available data on poaching, we can better understand its impact on local ecosystems and wildlife.

Lecturer: Quynh Trang, MA.

What kinds of human activities make it harder for wild animals to survive?

What kinds of human activities make it harder for wild animals to survive?

**Poaching/ Illegal hunting
Wildlife trade/ trafficking**

- Why are some people willing to pay a high price for a rhino horn?
- Because of the widely held belief in its medicinal power

- Why is the rhino horn ineffective for treating diseases?
- It's made of the same material as the human fingernail

What kinds of human activities make it harder for wild animals to survive?

Poaching/ Illegal hunting
Wildlife trade/ trafficking

- What was the percentage increase in the number of rhinos poached for their horns in South Africa last year compared to the previous year?

- 40%

- Why is the rhino horn ineffective for treating diseases?

- It's made of the same material as the human fingernail

What kinds of human activities make it harder for wild animals to survive?

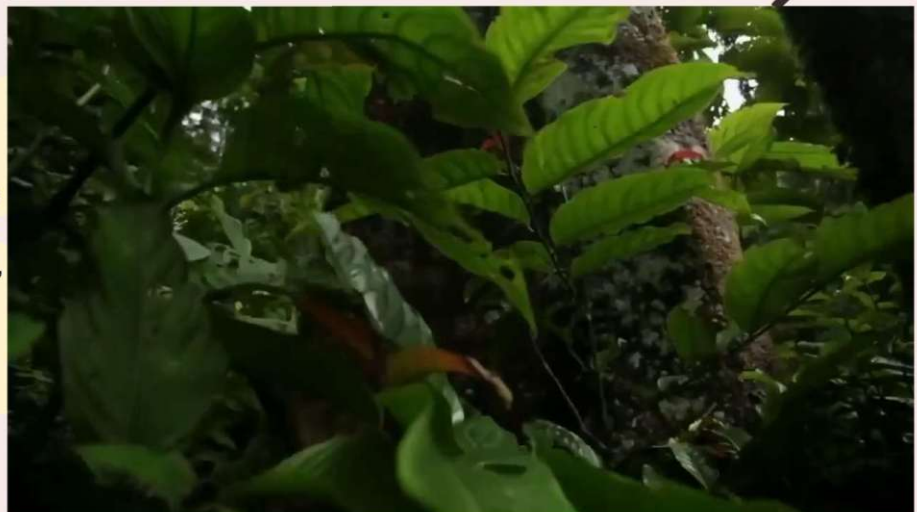

Habitat destruction
(Deforestation)

- Who is to blame for the elephants being on the edge of extinction?

- Ourselves/ Humans are to blame

- When their homes are destroyed, what specific locations do elephants and other wildlife have no choice but to migrate to?

- Farming villages

What kinds of human activities make it harder for wild animals to survive?

Habitat destruction
(Deforestation)

- What is the unfortunate outcome when elephants begin to feed on agricultural crops?

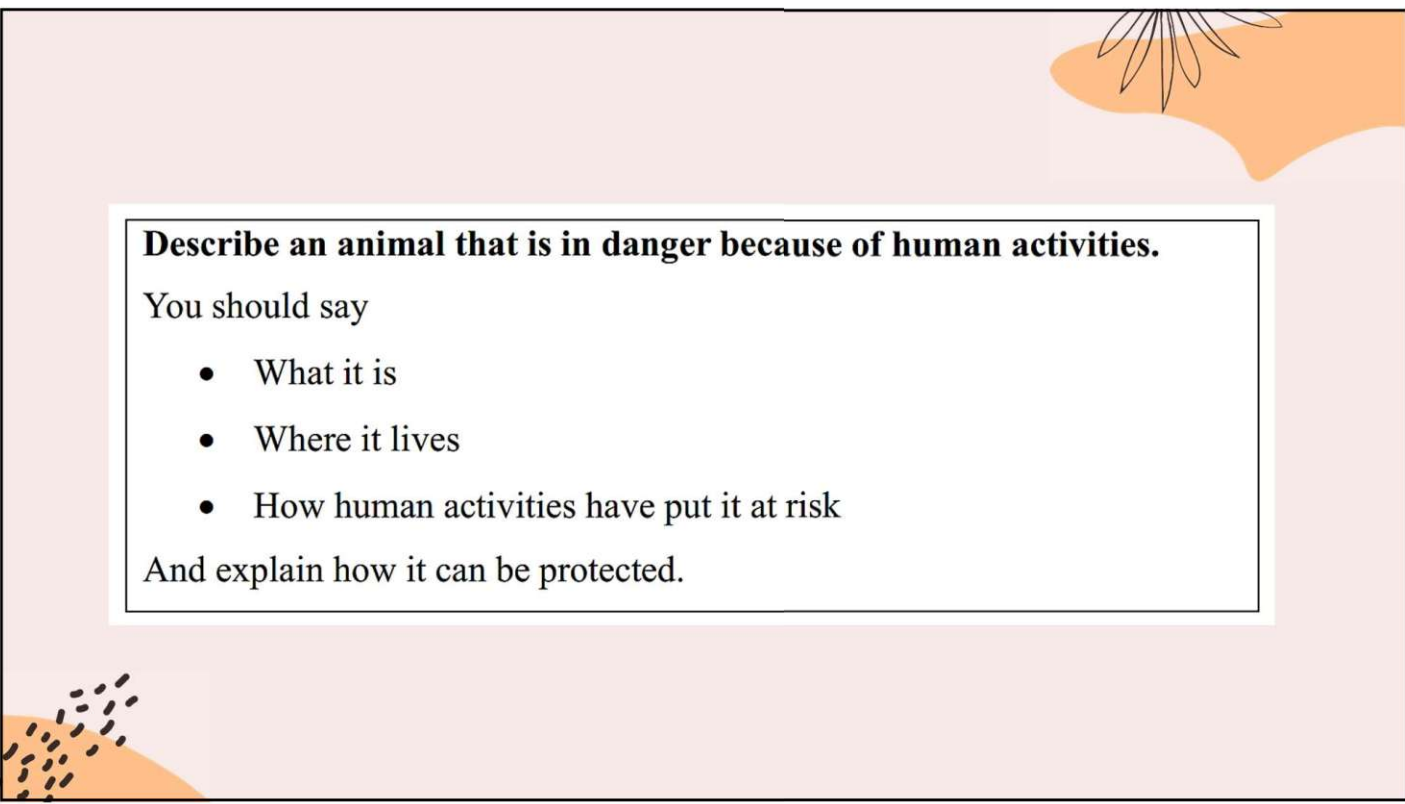

- Conflicts become deadly/ There have been many elephants killed and poisoned

- What play a part in the increase in the death rate of elephants?

- more habitat(s) cleared for plantations

LONG TURN

Describe an animal that is in danger because of human activities.

You should say

- What it is
- Where it lives
- How human activities have put it at risk

And explain how it can be protected.
