

FUTURE LIVING 6

The Henn na Hotel in Chiba, Japan, is managed by robots who can speak to guests in different languages.

IN THIS UNIT, YOU WILL:

- Read an article about robots at work
- Watch a video about an idea for a new way to deliver packages
- Read an article about how cities can rely less on cars
- Write about life in 2050

THINK AND DISCUSS:

1. Look at the photo above. Would you like to stay at this hotel? Would you prefer to talk to a robot or a human worker at a hotel or store?
2. What are some ways in which you think life will be different 50 years from now?

EXPLORE THE THEME

Look at the information on these pages and answer the questions.

1. Which innovation or change do you think will be the most important?
2. Are any of these changes happening already in a city you know? Explain.

By 2050, 70% of the world's population—over 6.5 billion people—will live in cities. Architects Skidmore, Owings, & Merrill designed a city of the future to meet the needs of these people. What will cities be like in the future? The architects think that “green” innovations¹ will change the way we live, work, and travel in our cities.

¹ A new idea about how to do something is an **innovation**.

CITY: 2050

“Green” offices

Wind turbines on top of buildings provide electricity.

Zero water loss

All rainfall is collected and used to supply drinking water.

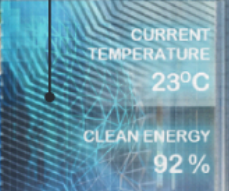

Drone taxis

People move around the city in large drones.

Public billboards

Huge video screens give information about the city.

Dense neighborhoods

There is a 10-minute walk from home to work, school, and stores.

Underground farms

Special lights help grow produce under homes and offices.

Smart streets

Cities have almost no cars. Fifty percent of people use bicycles to get to work.

Reading 1

PREPARING TO READ

- **A BUILD VOCABULARY** The words in **blue** are used in the reading passage. Read the paragraph. Then write the correct form of each word next to its definition.

Some people have robots in their homes to do **simple** jobs such as vacuuming floors. For most people, however, robots are not part of their everyday lives. But scientists are creating more **intelligent** robots. Some experts **predict** that “smart bots” will be our friends at home—taking care of us and playing with us—and they’ll be our **colleagues** at work. For example, they will help deal with customers. Will we **adapt** to having these robots in our lives? Experts think so.

1. _____: (n) someone who works with another person
2. _____: (v) to say that something will happen in the future
3. _____: (v) to become comfortable with something
4. _____: (adj) smart; able to understand things
5. _____: (adj) easy

- **B BUILD VOCABULARY** Complete the sentences using the correct forms of the words and phrases in the box. Use a dictionary to help you.

demand (n) **especially** (adv) **let** (v) **suggest** (v) **take away** (phr v)

1. Some experts think that robots will be good companions to people who live alone, _____ older people.
2. Some people worry that robots will _____ jobs _____ from human workers.
3. Some people _____ a robot vacuum clean their homes.
4. The staff won’t work until their _____ for a pay increase are met.
5. Streaming services _____ shows based on what you usually watch.

- **C USE VOCABULARY** Discuss these questions with a partner.

1. Do you think that robots will **take** jobs **away** from human workers?
2. Would you **let** an **intelligent** robot into your house?

- **D SKIM** You’re going to read about robots in the workplace. Skim the reading passage quickly. Check (✓) the topics mentioned in the passage. Then check your answers as you read.

- | | |
|--|---|
| ☐ 1. Robots that help farm workers | ☐ 4. Robots that teach in schools |
| ☐ 2. Robots that do office jobs | ☐ 5. Robots that work in hospitals |
| ☐ 3. Robots that you can put on your body | |

Reading Skill
in Unit 1.

Meet Your Cobot

Nurses in Dallas, U.S.A.,
with a helper robot
called Moxi

- A  If you're like most people, you probably don't see robots every day. But you will—**especially** at work. In the past, robots did **simple** jobs in factories, such as putting things together and painting. However, a new kind of workplace robot is more **intelligent** and able to help us more. Robotistic Manuela Veloso calls these new robots *cobots*—collaborative¹ robots.

NURSE HELPERS

- B Hospitals already use cobots to help nurses. Moxi, pictured above, works at Medical City Heart Hospital in Dallas, Texas, U.S.A. It has a smiling face, a robotic arm, and a large drawer for storage. Moxi does activities that usually **take** nurses **away** from patients. For example, it brings meals, takes tests to the lab, and removes dirty clothes and sheets. One advantage of Moxi is that it **lets** nurses spend more time directly helping sick people.

VEGETABLE PICKERS

- c Cobots are also helping tired farm workers. Vidal Pérez, who works at Taylor Farms in Salinas, California, likes his new colleague—a cobot he can ride on. For seven years, Pérez picked lettuce using a large knife. It was backbreaking work. Now, though, ART (Automated Romaine Harvester) does the cutting. ART is an eight-meter-long machine that moves through the fields and cuts the lettuce with a jet² of water. Pérez rides on the robot and puts the lettuce in boxes. “This is better, because you get a lot more tired cutting lettuce with a knife than with this machine,” Pérez said.

¹ When something is collaborative, it involves working together.

² A jet is a fast stream of liquid or gas that comes out of a small opening.

ROBOTS YOU WEAR

- D Other cobots move only with the help of their human **colleagues**. Engineers at Sarcos Robotics, Utah, U.S.A., for instance, are developing wearable robots that workers put on like suits. With the Sarcos wearable robot, humans are able to lift as much as 90 kilograms. A number of companies—including airlines—are testing the robots with their workers. At airports, for example, these robots could benefit baggage handlers by helping them to move heavy boxes more safely.

WILL WE LIKE OUR COBOTS?

- E Are there any disadvantages to a future full of cobots in the workplace? It's possible that some workers will not **adapt** to working with cobots. For instance, some workers worry that cobots will make their workplace worse—more stressful or dangerous. Other workers fear robots will end up doing the whole job, or the parts of it that are interesting and well paid. In fact, some people worry that companies won't need people at all. Daron Acemoglu, an economist, **suggests** that some managers will feel that human workers are too much trouble. According to Acemoglu, some managers think, “You don't need [humans]. They make mistakes. They make **demands**.”
- F For many companies, though, the benefits outweigh the costs. Because of this, Manuela Veloso **predicts** that these robots will be part of our working life very soon. “It's not something that's going to happen 20 years from now,” she says. “It's started.”

An engineer demonstrates a wearable robot at Sarcos Robotics, U.S.A.

UNDERSTANDING THE READING

Review this
Reading
Skill in
Unit 2.

- A UNDERSTAND MAIN IDEAS** Match each main idea below to a paragraph (A–F) from the reading passage. One paragraph is extra.

- ____ Cobots help workers pick vegetables.
- ____ Cobots are smarter than previous robots.
- ____ Some workers have concerns about working with cobots.
- ____ Cobots let workers do more important tasks.
- ____ Wearable cobots can help people move heavy things.

- B UNDERSTAND DETAILS** Complete the chart using the descriptions (a–h).

- | | |
|--------------------------|-------------------------|
| a. gives workers a ride | e. clears unclean items |
| b. brings meals | f. lifts heavy weights |
| c. can't move on its own | g. works outside |
| d. has a cutting tool | h. has a face |

Moxi	ART	Sarcos robot

CRITICAL THINKING Identifying Pros and Cons

Some writers describe the pros (advantages) and cons (disadvantages) of a topic. As you read, look for words that indicate pros (e.g., *advantage, benefit, better, positive*) and cons (e.g., *disadvantage, cost, worse, negative*).

- C IDENTIFY PROS** What are the main benefits of each cobot? Complete the sentences with information from the reading passage.

Critical Thinking

- Moxi allows nurses to _____ with patients.
- With ART, farm workers get less _____.
- The Sarcos robot helps workers carry heavy objects _____.

- D IDENTIFY CONS** Find three reasons in paragraph E why workers might not like working with cobots. Then complete the sentences.

Critical Thinking

- Workplaces could become more _____.
- Cobots might do the _____ aspects of the work.
- Some businesses might prefer cobots to _____ entirely.

- E EVALUATE PROS AND CONS** Do you think cobots will help or harm human workers in the future? Explain your reasons to a partner.

Critical Thinking

DEVELOPING READING SKILLS

READING SKILL Identifying Examples

Writers often give examples to support their ideas. Identifying examples can help you better understand a writer's ideas. Here are some common words or phrases that introduce examples:

For example, it brings meals, takes tests to the lab, and removes dirty clothes and sheets.

Engineers at Sarcos Robotics, **for instance**, are developing wearable robots that workers put on like suits.

In the past, robots did simple jobs in factories, **such as** putting things together and painting.

- **A IDENTIFY EXAMPLES** Circle the words and phrases that introduce examples in the following information about Wakamaru. Then underline the examples.

Wakamaru is a smart robot that can recognize faces, use gestures, and understand 10,000 Japanese words. It helps around the home in a friendly and caring way. For instance, it is able to talk to people about a variety of topics, such as the weather and the news.

Wakamaru can do many tasks for a family. For example, if someone it doesn't recognize comes to the house during the day, it can send a photo to family members' phones. It can also wake up family members at night if there is any trouble.

- **B IDENTIFY EXAMPLES** Match each example (a–e) to a sentence or sentence part (1–5).

- | | |
|---|---|
| 1. ____ Mobile technology has changed the way we shop. | a. such as looking for people after a natural disaster. |
| 2. ____ I think intelligent robots can help with dangerous tasks, | b. The elderly, for example, may prefer to talk to real people. |
| 3. ____ Intelligent technology can help people with everyday activities, | c. For instance, we could cycle to work instead of driving. |
| 4. ____ Some people are worried about the use of robots as caregivers. | d. such as cleaning and cooking. |
| 5. ____ There are many ways we can reduce the number of cars on the road. | e. For example, we can buy things through apps on our phones. |

- **C INTRODUCE EXAMPLES** Add an example or examples to each sentence. Use a suitable phrase to introduce the example(s).

1. I think cobots have a lot of benefits. _____

2. If I worked with a cobot, I would ask it to do tiring jobs, _____

An artist's impression
of drones delivering
packages in a city

Drone Delivery

Some urban¹ planners think that drones, like the ones in the photo, could make cities a better place to live. In Singapore, a company is developing drones to deliver² packages.³

A PREVIEW Look at the photo and read the caption. What might be some advantages and disadvantages of delivering packages by drone in a city? Discuss your ideas with a partner.

B MAIN IDEAS Watch the video. Why are urban planners in Singapore interested in drones? Choose the correct reason.

- a. because residents in Singapore receive more packages than people in other cities
- b. because drones could help move people around in the future
- c. because more people will need to fly to work in the future

C DETAILS Watch the video again. Choose the correct word or number to complete each sentence.

1. The drone delivery project is called **Skyways / FlyTeam**.
2. The drone carries packages that weigh up to **four / nine** kilograms.
3. The **drone / mailbox** sends a code to the customer.
4. The customer can pick up the package **24/7 / during business hours**.
5. The future goal of the drone project is to carry **heavier packages / humans**.

D EVALUATE Do you think drones will be able to move people safely around in the future? Explain your reasons to a partner.

Critical Thinking

¹ If something is urban, it is of the city.

² If you deliver something, you take it to someone.

³ A package is an object wrapped in paper that is usually mailed to someone.

Reading 2

PREPARING TO READ

- **A BUILD VOCABULARY** The words and phrases in **blue** are used in the reading passage. Read the paragraph. Then complete the sentences with the correct forms of the words.

Getting around a city in the future will probably be different from today. Some experts think that driverless cars will be an important transport **option**. These cars can connect to each other and tell each other where to go to avoid **traffic**. Other people think we should **figure out** a different approach. For example, a city could create a **system** of bike paths that **link** different areas together.

1. I'm often late to work because of the _____.
2. To get around a big city without a car, there are two main _____—the bus or the subway.
3. London has a large subway _____ that _____ most parts of the city together.
4. We need to _____ a way to make riding in cities safer for cyclists.

- **B BUILD VOCABULARY** The words in **blue** are used in the reading passage. Match each word to its definition. Use a dictionary to help you.

- | | |
|---------------------------|---|
| 1. _____ allow | a. (n) the earth; soil |
| 2. _____ bridge | b. (n) a sound |
| 3. _____ ground | c. (adj) needed |
| 4. _____ necessary | d. (v) to let |
| 5. _____ noise | e. (n) a structure that crosses rivers or roads |

- **C USE VOCABULARY** Discuss these questions with a partner.

1. Is **traffic** a problem where you live? Which areas or times are especially bad?
2. What **options** do you have to get around your city without a car?
3. Which **system** do you think is the best option to reduce traffic—driverless cars or bicycle paths?

Critical Thinking

- **D PREDICT** Read the photo caption and the title of the reading passage. What do you think the passage is mainly about? Choose the best option. Then check your answer as you read.

1. the future of cars
2. some alternatives to cars
3. cities that don't have traffic

Riding the Skies

The Mi Teleférico cable car system in La Paz, Bolivia

- A  The benefit of cities is that they bring people together. But the use of cars has created too many places filled with roads, parking lots, and **traffic**. To build the cities of the future, experts think we must reduce our use of cars. But how? The answer may be above our heads.

SUBWAY IN THE SKY

- B Bolivia's Mi Teleférico (*My Cable Car* in Spanish) **links** El Alto to downtown La Paz, hundreds of meters below. Almost two million people live in the two cities. Many of them travel from one

place to the other every day for work. Before the cable car **system**, there was only one **option**. Cars crowded the steep road that connects La Paz to El Alto. The drive took more than an hour.

- c A trip on Mi Teleférico is a big improvement. Ten lines now carry 250,000 people a day. A cable car arrives every 10 to 12 seconds, and trips are 40 minutes quicker than by road. There are clearly other benefits, too. Instead of the **noise** of traffic, riders have a quiet ride. They float above buildings and enjoy a beautiful view.

The Cora flying taxi

DRIVERLESS PLANES

D What if your car were a plane? In an airport near San Jose, California, sits a small airplane—similar to a large drone. The plane, Cora (in the photo above), takes off like a helicopter, and flies using an electric battery. While it has two seats, they aren't for the pilots—Cora is self-flying. A pilot on the **ground** watches and can control the plane from there if **necessary**.

E Traffic is often a problem in Los Angeles. To Fred Reid, one of the founders of Cora, self-flying planes make a lot of sense: "There's no doubt ... that this is not only going to happen, it has to happen." According to Reid, Cora would first be used as an air taxi, flying passengers from airports in Los Angeles to particular places in the city. There are other advantages besides faster trips and avoiding traffic. Because Cora is electric, it's better for the environment. Reid believes a ride wouldn't be that expensive either—each ride would cost a bit more than a taxi and much less than a helicopter.

F What will it be like to have thousands of these flying across cities? What kind of world will it create? There are still a lot of questions to answer, but Reid isn't worried. "We'll **figure it out**," he says.

SUPER BIKE-WAYS

G Seven meters above Copenhagen Harbor, Denmark, is the Cykelslangen, or the Bicycle Snake. This is one of the few **bridges** in the world for bikes only. The ride across the bridge is pleasant—cyclists can see people walking, swimming, and shopping below. The Bicycle Snake is not the only bike-friendly bridge in the city. Between 2006 and 2019, Copenhagen built 17 bridges for people who walk or ride bicycles. There are no cars **allowed**.

H These bridges bring clear benefits for the city. More than 60 percent of people in Copenhagen go to work or school by bicycle. Car-free bridges allow these riders to ride around the city more safely. By helping more people ride bikes rather than drive, less air pollution and noise is produced, and the city becomes cleaner and quieter for everyone.

The Cykelslangen bicycle bridge, Copenhagen, Denmark

UNDERSTANDING THE READING

- A UNDERSTAND MAIN IDEAS** Read the first sentence of a summary of the reading passage. Check (✓) three other sentences to complete the summary.

To avoid the problems caused by cars in cities, some cities are using solutions above the ground.

- ☐ 1. Almost two million people live in the cities of La Paz and El Alto.
- ☐ 2. A cable car system, such as Mi Teleférico, makes trips quicker.
- ☐ 3. A driverless plane could take people home quickly—like a taxi.
- ☐ 4. A plane will fly 300 meters above the ground.
- ☐ 5. A special bridge, such as the Bicycle Snake, helps cyclists get around easily.

- B UNDERSTAND DETAILS** Do the following statements match the information in the reading passage? Choose **T** for true, **F** for false, or **NG** for not given.

- | | | | |
|--|---|---|----|
| 1. A trip by car between El Alto and La Paz can take over an hour. | T | F | NG |
| 2. A cable car on Mi Teleférico arrives every 10 to 12 minutes. | T | F | NG |
| 3. Using Cora would be cheaper than taking a taxi. | T | F | NG |
| 4. Copenhagen built 17 car-free bridges between 2006 and 2019. | T | F | NG |
| 5. There are parking garages in Copenhagen for bicycles. | T | F | NG |

- C IDENTIFY PROS** Which benefits of each transportation option are mentioned in the passage? Check (✓) the pros the reading passage talks about.

	Faster than cars	Helps the environment	Safe	More enjoyable
Cable car				
Air taxi				
Bicycle bridges				

- D JUSTIFY YOUR OPINION** How well do you think each of the transport options in the reading passage would work in your city? Choose a rating from 1 (It wouldn't work at all) to 5 (It's a great idea). Then write a reason for your choice.

Transportation	My Rating	Reason
Cable car	1 2 3 4 5	
Air taxi	1 2 3 4 5	
Bicycle bridges	1 2 3 4 5	

Review this Critical Thinking Skill in Unit 5.

VOCABULARY EXTENSION

WORD LINK -able

Some adjectives end in the suffix *-able* which means "able to." For example, *wearable* means "able to be worn."

- **A** Choose the correct form of the word to complete each sentence.
 1. Cobots are **suit** / **suitable** for many workplaces.
 2. Experts **predict** / **predictable** that robots will be a big part of our lives in the future.
 3. People often use their voices to **control** / **controllable** their cellphones.
 4. Future robots will be **adapt** / **adaptable**. They will be able to play games, or do anything else we need them to.
 5. Not everyone feels **comfort** / **comfortable** with new forms of technology.

WORD FORMS Changing Verbs Into Nouns

Adding *-ment* to some verbs can change them into nouns. A noun with the suffix *-ment* means "the action or result" of doing the verb.

verb	noun
improve	<i>improvement</i>
equip	<i>equipment</i>
agree	<i>agreement</i>
manage	<i>management</i>
achieve	<i>achievement</i>

- **B** Complete each sentence with the correct noun form of the words below.

develop equip excite govern improve

1. If you don't know how to use that _____, ask someone to explain it to you.
2. Since 2005, the Danish _____ has spent \$1.3 billion to help people ride bikes instead of drive.
3. Air taxis like Cora are still in _____, but they should be ready to use soon.
4. Many people feel _____ when they see a robot for the first time.
5. To cyclists in Copenhagen, bicycle bridges are a big _____ over older car bridges.

EXPLORING WRITTEN ENGLISH

A NOTICE Read the sentences below. Choose the purpose (a or b) of each sentence.

1. These robots will be part of our working life very soon.
 - a. to make a prediction
 - b. to talk about a plan
2. We're going to start training with the wearable robots next week.
 - a. to make a prediction
 - b. to talk about a plan
3. The new bridge is going to open to cyclists next month.
 - a. to make a prediction
 - b. to talk about a plan
4. By 2050, most people will have robots in their homes.
 - a. to make a prediction
 - b. to talk about a plan

LANGUAGE FOR WRITING

Using *will* and *be going to*

We use *will* and *be going to* to make predictions about the future. *Will* is often used for events further in the future. *Be going to* is usually used for events happening in the near future which are likely to be more certain.

*Experts predict that most workplaces **will have** cobots.
Cities are **going to look** very different in the future.*

We can add *probably* if we're not certain about the prediction.

*In 2050, we **will probably not be** driving cars anymore.*

We also use *be going to* to talk about a future plan or decision.

*They're **going to arrive** before dinner.
I'm **not going to fly** to the conference.*

Go to
page 206 for
the Grammar
Reference.

B APPLY Complete the sentences with the correct form of *will* or *be going to* and the verbs in parentheses.

1. The city _____ (build) three more bridges for cyclists in the next two years.
2. In 2050, most cars _____ (be) electric.
3. I _____ (buy) a smartphone after work today.
4. Our company _____ (use) robots to clean our offices, starting next month.
5. In 100 years, space travel _____ (be) more common than today. It's even possible that some people _____ (live) on the moon or other planets.

- **C APPLY** Use the words to write sentences about the future. Use *will* or *won't* (*will not*) and *probably*. Use your own opinion.

1. robots / schools

2. people / cobots

3. people / air taxis

4. cars / driverless

- **D REFLECT** Use the phrases to write sentences about your plans. Use *going to* or *not going to*.

1. (meet my friends) _____

2. (eat at a restaurant) _____

3. (take a vacation) _____

- E ANALYZE** Work with a partner. Think of an object that will probably be different in the future. Think about what it will look like and how it will work. Note your ideas in the chart. Then write three sentences using *will* and *be going to*.

Object	What will it look like/how will it work?
	1.
	2.
	3.

WRITING SKILL Using Pronouns to Avoid Repetition

As you learned in Unit 5, pronouns usually refer to nouns that appear earlier in a text. You can use pronouns to avoid repetition.

Example: Robots will do many things around the house. For example, **they** will clean the house and prepare food.

Try not to use a pronoun that can refer to more than one thing in a sentence, as this can be confusing. For example, in the sentence "Robots will work with people, and **they** will become more efficient," the word "they" could refer to "robots" or "people."

- • • **F** Draw a line through the repeated noun(s) in the second sentence in each item. Then rewrite the second sentence with suitable pronouns.

1. Robots do many jobs. For example, robots work at airports and on farms.

2. The cable car system works well. People like the cable car system a lot.

3. Cycling is an easy way to get around Copenhagen. Cycling is also good for the environment.

4. Manuela Veloso builds robots. Manuela Veloso thinks robots will soon be part of our lives.

5. Vidal Pérez at Taylor Farms likes his new colleague. It's a robot Vidal Pérez can ride on.

- • • **G** Read the phrases below. What does each underlined pronoun refer to? Write the correct word or phrase.

1. Robots will work with people. They will help them with certain jobs.
They = _____ them = _____
2. Driverless planes will allow people to move around the city. They will be like air taxis.
They = _____
3. Mi Teleférico has made traveling easier. It takes people to and from La Paz.
It = _____
4. Moxi is a robot that works in a hospital. It brings meals to patients.
It = _____
5. In the future, people will wear high-tech devices. The devices will give useful information as they walk around the city.
they = _____

▼ A robot serves food in a smart restaurant.

WRITING TASK

GOAL You are going to write a **paragraph** on the following topic:
What do you think life will be like in 2050?

- A BRAINSTORM** Imagine living in a city in 2050. What do you think it will be like? What will your home, work, education, etc. be like? Brainstorm at least three ideas for each category.

What will _____ be like in 2050?	Your ideas
work	
travel	
entertainment	
home	
education	

- B WRITE DETAILS** Choose a category from Exercise A with the three best ideas. Note down more details about each idea.

- _____
- _____
- _____

- C PLAN** Use the information above to complete an outline for your paragraph. Apart from the topic sentence, don't write complete sentences.

OUTLINE

Topic Sentence: _____ will be very different in 2050.

Supporting Idea 1: _____

Details: _____

Supporting Idea 2: _____

Details: _____

Supporting Idea 3: _____

Details: _____

- D FIRST DRAFT** Use the information in your outline to write a first draft of your paragraph. Use *will* or *be going to* to make predictions. Refer to the writing model below to help you.

WRITING MODEL

A typical home in 2050 will probably be very different from a home of today. First, smart appliances will probably make our lives easier. For example, refrigerators will know how much food we have, so they will be able to tell us when we need to go shopping. In addition, computers will control systems in the house. For instance, computers will be able to learn what we like and don't like, and control things around the house, such as lighting and temperature. Finally, most homes will probably have robots that will help around the house. They will do important jobs, such as cleaning, cooking, and taking care of people.

- E USE SYNONYMS** Look at your first draft. Find words that you repeat. Can you paraphrase those words with synonyms?

- F REVISED DRAFT** Now use the questions below to revise your paragraph.

- ☐ Does a strong topic sentence introduce the main idea?
- ☐ Are there three different supporting ideas?
- ☐ Are synonyms and pronouns used to avoid repetition?
- ☐ Are all verb forms correct?
- ☐ Are the ideas in the correct order?

- G FINAL DRAFT** Follow these steps to write a final draft.

1. Check your revised draft for mistakes with future forms.
2. Now use the checklist on page 203 to write a final draft. Make any other necessary changes.
3. Work in pairs and read your partner's final draft. Give feedback on each other's paragraphs.

Review
