

STAYING HEALTHY 7

A large group practices yoga in Jiaozuo, China.

IN THIS UNIT, YOU WILL:

- Read an article about how exercise changes the brain
- Watch a video about health and advertising
- Read an article about a medical mystery
- Write about staying healthy

THINK AND DISCUSS:

1. Look at the photo above and read the caption. Would you like to join an exercise class like this? Why or why not?
2. How important is staying healthy to you? Explain.

EXPLORE THE THEME

Look at the information on these pages and answer the questions.

1. Which of the activities in the survey do you do? How often do you do each one?
2. In what other ways do you stay healthy?

What do you do to stay healthy?

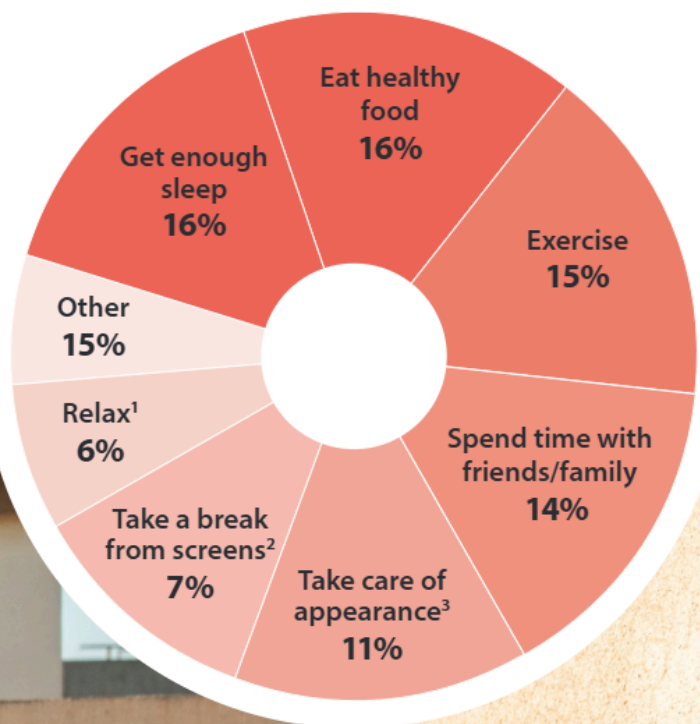

A family in Iraq relax together on the roof of their home.

A survey of 23,000 adults found that eating healthy food and spending time with family were some of the most common activities they do to stay healthy.

¹ When you **relax**, you take a break or become less stressed.

² A **screen** is the flat surface of a laptop or phone where you see content.

³ Your **appearance** is what you look like.

Reading 1

PREPARING TO READ

- **A BUILD VOCABULARY** The words in **blue** are used in the reading passage. Read the paragraph. Then complete the sentences with the correct forms of the words.

Research shows that sitting for more than eight hours a day at work or school is not healthy. However, there are some activities you can do to be more **active**. First, try walking. Walking is great **exercise** that you can easily do at any time. For example, you can take a 20-minute walk in the **middle** of the day during your lunch break. Second, stand up whenever you can. For instance, stand up to check text messages or make phone calls. There are a lot of surprising **benefits** to standing. It can **protect** you from heart disease, give you energy, and help with back problems.

1. If you are halfway through doing something, you are in the _____ of it.
2. A good result that you get from doing something is a(n) _____.
3. If you do a lot of things, you are a(n) _____ person.
4. To be strong and healthy, you need regular _____.
5. When you _____ something, you keep it safe from harm.

- **B BUILD VOCABULARY** The words in **blue** are used in the reading passage. Match each word to its definition. Use a dictionary to help you.

- | | |
|--------------------------|--|
| 1. _____ stressed | a. (adj) being very tired and worried |
| 2. _____ positive | b. (n) your brain's ability to remember things |
| 3. _____ memory | c. (n) the smallest part in the bodies of living things |
| 4. _____ muscle | d. (adj) full of hope; helpful |
| 5. _____ cell | e. (n) a part of your body connected to bone that helps you move |

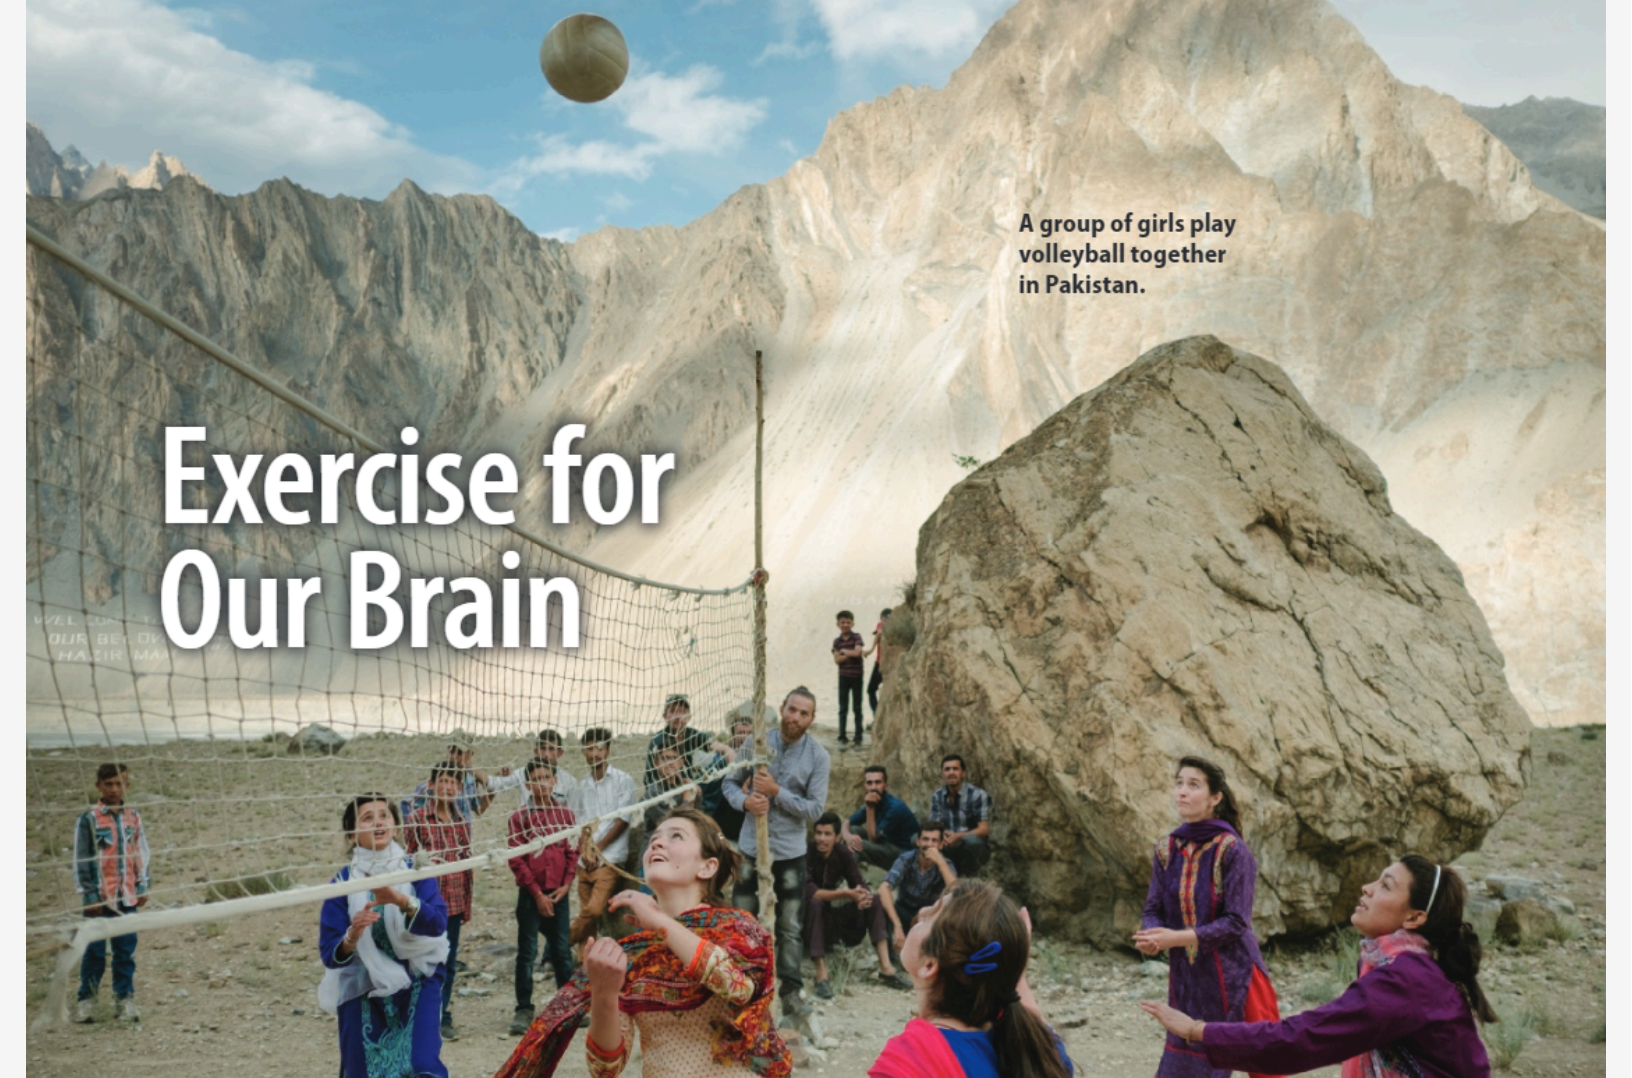

- **C USE VOCABULARY** Discuss these questions with a partner.

1. What **exercise** do you do regularly? What are the **benefits** of that type of exercise?
2. What do you do when you feel **stressed**?
3. Why do you think it is helpful to have a good **memory**?

Critical Thinking

- **D PREDICT** Read the first paragraph of the reading passage. Why do you think Rodriguez was a better scientist after she danced? Discuss your ideas with a partner. Check your answer as you read the passage.

I think she was a better scientist after dancing because _____
_____.

A group of girls are playing volleyball in a mountainous area in Pakistan. The girls are wearing colorful traditional clothing. A volleyball is in the air above the net. The background shows steep, rocky mountains under a clear sky. A large rock is on the right side of the image.

A group of girls play volleyball together in Pakistan.

Exercise for Our Brain

- A**  In the **middle** of her graduate studies program, Constanza Cortes Rodriguez was feeling burnt out.¹ “Nothing was working in the lab, and I was very **stressed**,” she says. That’s when she joined a dance group at her school. She fell in love with dancing, and soon she was practicing nine or more hours a week. Dancing took hours away from her work, which she worried would affect it, but Rodriguez began to realize that dancing was actually making her a better scientist. “I could feel myself thinking differently and remembering things better,” she says.

THE BRAINY BENEFITS OF EXERCISE

- B** Researchers have known for a long time that **exercise** causes **positive** changes in the brain. When children play sports, for example, they get better grades. Exercising improves memory: adults who exercise regularly are less likely to get Alzheimer’s disease.² People in the early stages of Alzheimer’s can enjoy **benefits** from exercise, too: it improves their **memory**. And doctors say exercising helps people with stress and depression. Now, new research is showing *how* our **muscles** change our brains.

¹ If you are burnt out, you are very tired, usually because of your work.

² Alzheimer’s disease affects a person’s brain. It can cause problems such as memory loss, confusion, and changes in personality.

MUSCLE-BRAIN CONNECTION

- C** During exercise, muscles produce a chemical called irisin. Researchers looked at mice with a lot of irisin and mice with only a little. The researchers found that the mice with more irisin performed better at cognitive tasks—activities that involve thinking. For example, they were better able to see the difference between similar patterns. Why? Irisin helped the mice grow healthy new brain **cells**. The mice with less irisin grew new brain cells, too, but their new cells were abnormal,³ so they didn't work correctly.
- D** Irisin may also **protect** the brain from some diseases. Researchers studied mice that had Alzheimer's-like disease and low levels of irisin. When the mice were given more irisin, their symptoms⁴ began to improve. Scientists think that this is possibly because irisin keeps the brain's immune system⁵ healthy. When the immune system is working correctly, it cleans up damaged cells in the brain. When it isn't working correctly, it can kill healthy cells.
- E** So do these test results on mice apply to humans? Scientists believe so. Irisin in mice is exactly the same chemical as irisin in humans. That suggests that the effects would be the same, too.

AN EXERCISE MEDICINE?

- F** Rodriguez, who is now a professor at the University of Alabama, believes that this research means “we're on the [edge] of a great age of discovery” that may help millions of people. We may be able to make medicines that copy the effects of exercise. It could help people who can't exercise, such as those who have difficulty walking. This could also have incredible benefits for people with Alzheimer's disease, stress, and depression. Developing these medicines will probably not be easy. However, scientists are hopeful.
- G** But what can we do while we wait for these new medicines? Karina Alviña, a scientist, says, “Keep yourself **active**—even if it's walking a few minutes a day. If you can, then do that.”

³ If something is abnormal, it is different from usual in a bad way.

⁴ Symptoms are changes in the body that suggest a disease.

⁵ The immune system is the system in the body that protects you from diseases.

▼ **Elderly South Korean women practice taekwondo to keep active.**

UNDERSTANDING THE READING

- A UNDERSTAND THE MAIN IDEA** What is the reading passage mainly about? Choose the best option.
- which kinds of exercise are best for the brain
 - how exercise can cause positive changes to the brain
 - how the brain creates a chemical that helps muscles
- B UNDERSTAND DETAILS** Complete each sentence. Write up to three words from the reading passage in each space.
- Diseases like _____ are less common in older people who exercise.
 - Mice with higher levels of irisin did better at _____.
 - The irisin in mice is the _____ as human irisin.
 - In the future, new medicines could _____ of exercise.
 - New medicines could help people with Alzheimer's disease, _____.
- C IDENTIFY SUPPORTING IDEAS** Read the sentences from paragraph D. Write **M** if the sentence is a main idea, or **S** if it is a supporting idea.
- _____ Irisin may also protect the brain from some diseases.
 - _____ When the mice were given more irisin, their symptoms began to improve.
 - _____ When the immune system is working correctly, it cleans up damaged cells in the brain.

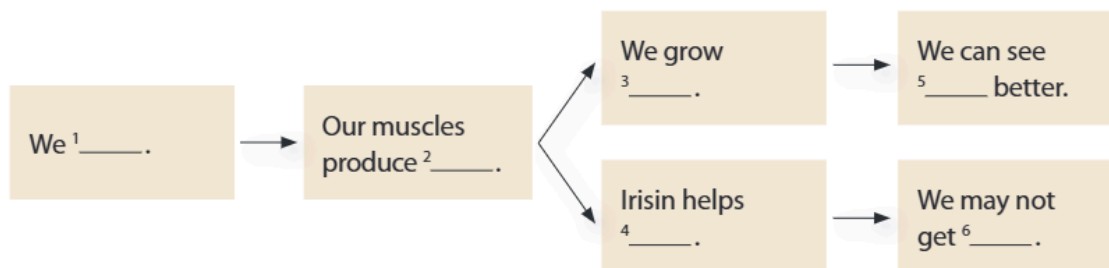

Review this
Reading
Skill in
Unit 3.

CRITICAL THINKING Identifying a Sequence

When explaining scientific research, writers sometimes describe a sequence—or order—of events. Making notes in a flow chart can help you understand the order of events more clearly.

- D IDENTIFY A SEQUENCE** How does exercise change the brain? Complete the events in the flow chart below using the information (a–f).
- irisin
 - healthy brain cells
 - the difference between patterns
 - our immune system
 - Alzheimer's disease
 - exercise

Critical Thinking

- E EVALUATE** Do you think scientists should create a drug that copies the effects of exercise? Why or why not? Discuss your ideas with a partner.

Critical Thinking

DEVELOPING READING SKILLS

READING SKILL Identifying Facts and Speculations

There are certain words you can look for in a reading passage to decide if a statement is a fact or a speculation. A **fact** is an idea that has been proven to be true. A **speculation** is an idea that is based on evidence, but has not yet been proven.

Writers use words such as *think, believe, probably, possibly, suggest, and may* when talking about things they are not sure about.

- **A IDENTIFY FACTS AND SPECULATIONS** Read the sentences from the reading passage. For each statement, write **F** for fact or **S** for speculation. For each speculation, underline the word that shows that the statement is a speculation.

1. ____ Researchers have known for a long time that exercise causes positive changes in the brain.
2. ____ And doctors say exercising helps people with stress and depression.
3. ____ During exercise, muscles produce a chemical called irisin.
4. ____ Irisin may also protect the brain from some diseases.
5. ____ Irisin helped the mice grow healthy new brain cells.
6. ____ That suggests that the effects would be the same, too.
7. ____ Rodriguez believes that this research means “we’re on the [edge] of a great age of discovery.”
8. ____ Developing these medicines will probably not be easy.

- **B IDENTIFY FACTS AND SPECULATIONS** Read the paragraph about Hippocrates. Write **F** for each sentence (1–6) that provides a fact, and **S** for each sentence that expresses a speculation.

- | | | |
|---------|---------|---------|
| 1. ____ | 3. ____ | 5. ____ |
| 2. ____ | 4. ____ | 6. ____ |

For many people, Hippocrates is the father of Western medicine. ¹Hippocrates was born on the island of Kos in Greece. ²No one knows exactly when he was born, but it was probably in 460 B.C. He was a doctor on Kos and wrote about medicine. ³We know very little about his life—some believe he traveled around Greece teaching medicine. ⁴We do know that he was famous while he was alive because the philosopher Plato said so in his writings. ⁵Many medical students today learn the “Hippocratic oath”—an idea that a doctor should always help patients and do them no harm. ⁶Hippocrates may have written the oath, but some historians suggest this is unlikely. Hippocrates probably died in 375 B.C.

Part of an old advertisement
for Listerine mouthwash

Advertisers Against Germs

Nearly 200 million people use an antiseptic¹ mouthwash in the United States. The first mouthwash sold—Listerine—was named after Joseph Lister. Lister was one of the first doctors to realize that germs² can cause illness during surgery.

A PREVIEW Read the information above. Do you use mouthwash? Why or why not? Explain your answer to a partner.

B MAIN IDEAS Watch the video. Complete the summary of the main ideas with the correct word or phrase (a–d).

a. advertisers b. customers c. public health groups d. scientists

In the 1820s, people realized that being dirty was not healthy. ¹_____ discovered that germs were making people sick. Many people didn't believe this. But one group did—²_____. They used the germ theory of disease to sell cleaning products. ³_____ loved these advertisements—so, soon, ⁴_____ used them, too. These advertising tricks made more Americans believe that germs cause disease.

C DETAILS Watch the video again. What did advertisers say Listerine could do? Check (✓) the correct answers mentioned in the video.

- | | | |
|---|---|--|
| ☐ 1. fight a cold | ☐ 3. prevent a sore throat | ☐ 5. help you be more popular |
| ☐ 2. clean your hair | ☐ 4. make your teeth white | ☐ 6. stop bad breath |

D EVALUATE What public health advertisements have you seen? Did they change your behavior? Discuss with a partner.

Critical Thinking

¹ An antiseptic is a chemical that kills harmful germs.

² A germ is a very small living thing that can cause disease.

Reading 2

PREPARING TO READ

- **A BUILD VOCABULARY** The words in **blue** are used in the reading passage. Read the paragraph. Then write the correct form of each word next to its definition.

Adults often have at least one cold a year. Symptoms can develop **quickly**. You might go to bed with a slight headache and wake up with a cough and a sore throat. Then you might call your employer and say you are **sick** and can't come to work. Today, we know that we can catch a cold from someone who already has one. They might cough near us, or we might **touch** something that has germs on it. But in the past, people had a lot of different ideas about the **cause** of the common cold. Not too long ago, people thought cold temperatures caused the illness.

1. _____: (n) the reason why something happens
2. _____: (adv) fast
3. _____: (v) to feel something, usually with your hand
4. _____: (adj) not feeling well; having a disease

- **B BUILD VOCABULARY** The words in **blue** are used in the reading passage. Match each word to its definition. Use a dictionary to help you.

- | | |
|-----------------------------|--|
| 1. ____ dirty | a. (n) a statement about what should be done |
| 2. ____ embarrassed | b. (n) a person who gets medical care |
| 3. ____ patient | c. (adj) not clean |
| 4. ____ presentation | d. (n) a talk in which you explain an idea |
| 5. ____ rule | e. (v) to manage or control |
| 6. ____ run | f. (adj) feeling worried about what people think of you because of something you said or did |

- C USE VOCABULARY** Discuss these questions with a partner.

1. When is the last time you were **embarrassed**? What happened?
2. When was the last time you gave a **presentation**? What was it about?

- D PREDICT** You are going to read about the history of handwashing. When do you think people started washing their hands regularly? Choose the best answer. Check your answer as you read the passage.

- a. the 18th century b. the 19th century c. the 20th century

Ignaz Semmelweis washes his hands before examining patients.

Show of Hands

- A  Why do you wash your hands? It's likely that you do it because you know it will help keep you healthy. You know that you pick up germs every time you **touch** something, and germs can cause diseases. However, people didn't always know these things.

MYSTERY ILLNESS

- B In the 1840s, Ignaz Semmelweis ran a hospital in Vienna that had two maternity wards.¹ Male doctors **ran** one of the wards while female midwives² ran the other. Semmelweis noticed that the male doctors' **patients** were dying twice as often as the midwives' patients. He wanted to find out why.
- C He looked at a number of possible **causes**. He first thought the mothers' position during birth made them ill. Then he thought that mothers didn't like seeing male doctors. Perhaps they were **embarrassed**, and this was making them **sick**? Eventually, Semmelweis found the cause: cadavers.³
- D In the mornings, the male doctors worked on cadavers at another part of the hospital. Then, in the afternoons, they delivered babies. The midwives, on the other hand, only worked on the maternity ward. Back then, doctors didn't wash their hands after each patient visit, or even after working with cadavers. Semmelweis thought that the doctors' **dirty** hands were transferring "cadaverous particles" to the new mothers.
- E In 1847, Semmelweis made a new **rule** at the hospital: doctors had to wash their hands. The number of deaths in the doctors' maternity ward **quickly** decreased.

¹ Maternity wards are areas of hospitals where babies are born.

² Midwives help women give birth to babies.

³ Cadavers are dead human bodies.

FIGHT FOR HANDWASHING

- F** Semmelweis wanted to tell other doctors about his findings. In the spring of 1850, he went to a meeting of the Vienna Medical Society. There, he gave a **presentation** to a group of doctors about the importance of handwashing. The doctors rejected⁴ his ideas, however. Disappointed, Semmelweis moved to Budapest and wrote a book about handwashing. He wrote lots of articles, too. But other doctors still didn't believe him.
- G** A few years after Semmelweis died, doctors finally accepted his ideas. Later, the work of chemist Louis Pasteur, surgeon Joseph Lister, and others proved that germs cause disease. Eventually, in the 1870s, doctors began washing their hands regularly. A century later, the Medical University of Budapest changed its name to Semmelweis University.

⁴If you reject something, you don't agree with it.

Handwashing Today

▲ A school handwashing station in Tanzania

- H** Today, washing our hands seems like an easy way to stay healthy. However, it's not easy for everyone. Many people can't wash their hands regularly because they don't have running water. Three billion people—40 percent of the world's population—can't wash their hands with soap and water at home. Some governments are trying to change that. In the photo above, students are cleaning their hands at an outdoor handwashing station at Keko Mwanga B Primary School in Dar es Salaam, Tanzania. WaterAid has worked with the Tanzania Ministry of Education to teach the importance of handwashing at schools throughout the country.

UNDERSTANDING THE READING

- **A UNDERSTAND THE MAIN IDEA** What is the reading passage mainly about? Choose the best option.

- a. A doctor in Vienna discovered that handwashing could save lives.
- b. In the past, doctors in hospitals did not wash their hands regularly.
- c. Doctors today know that diseases are caused by germs.

- **B UNDERSTAND MAIN IDEAS** Which paragraph (A–G) best completes this sentence? Write A–G.
The main idea of paragraph ____ is “After doctors started washing their hands, fewer women in their ward died.”

Review
this Reading
Skill in
Unit 2.

- **C UNDERSTAND DETAILS** Complete the summary about the first part of the reading passage. Write no more than three words from the reading passage in each space.

In the 1840s, Ignaz Semmelweis noticed that there was a problem in one of the

¹ _____ in his hospital: many new mothers were dying.

He found that the women in the doctors’ ward were dying twice as often as in the one

run by ² _____. Semmelweis learned that the male doctors

³ _____ before coming to the maternity ward, where they

⁴ _____. The midwives, however, stayed in the maternity ward

all day. Semmelweis thought that the women were getting sick because the male doctors

had ⁵ _____.

- **D IDENTIFY A SEQUENCE** Number the events (1–9) in the order that they happened according to the reading passage.

- a. 1 Semmelweis noticed that a lot of women were dying in the male doctors’ ward.
- b. ____ He shared his handwashing ideas in a presentation to other doctors.
- c. ____ He thought of a few possible causes, but they were all wrong.
- d. ____ Pasteur, Lister, and others showed that germs cause disease.
- e. ____ The doctors at the Vienna Medical Society didn’t like his ideas.
- f. ____ The number of women who died in the male doctors’ ward decreased.
- g. ____ Doctors around Europe started washing their hands.
- h. ____ He began to think that cadavers were the problem.
- i. ____ He told the doctors at the hospital to wash their hands.

- E INFER** Why do you think the doctors at the meeting of the Vienna Medical Society rejected Semmelweis’s ideas? Note your ideas below. Then discuss your reasons with a partner.

Critical Thinking

I think doctors rejected Semmelweis’s ideas because _____

VOCABULARY EXTENSION

WORD PARTNERS adjective + exercise

Some collocations are in the adjective + noun form. Below are definitions of some common collocations with the noun *exercise*.

daily exercise: exercise someone does every day

gentle exercise: physical exercise that is not too difficult or exhausting

mental exercise: exercise that uses the brain

moderate exercise: a good amount of exercise, not too little or too much

physical exercise: exercise that uses the muscles, such as jogging

- **A** Choose the correct adjective to complete each sentence.

1. Doctors recommend we should do **daily** / **physical** exercise at least four times a week.
2. For older people, doctors also recommend doing **gentle** / **mental** exercises—such as a crossword or other word games.
3. An example of **mental** / **moderate** exercise is jogging for half an hour three days a week.
4. I go to the pool every day—so my **daily** / **moderate** exercise is swimming.
5. Doing yoga or gardening are good examples of **gentle** / **moderate** exercise.

WORD PARTNERS Synonyms

A synonym is a word that is very similar in meaning to another word. For example, *large* is a synonym of *big*. A good dictionary can tell you synonyms. Often, synonyms are listed next to the definition of a word:

Thesaurus **big** *adj.* large, huge, enormous

Note that some words have more than one meaning. Make sure that the synonym that you choose has the correct meaning.

Review the
Writing Skill
in Unit 5.

- **B** Use a dictionary to find a good synonym of each word. Use the definitions from this unit. More than one answer is possible.

1. exercise (v) _____
2. positive (adj) _____
3. protect (v) _____
4. sick (adj) _____
5. rule (n) _____

EXPLORING WRITTEN ENGLISH

A NOTICE Read the sentences. Check (✓) the ones that give advice.

- ☐ 1. You said that you wanted to get more exercise.
- ☐ 2. You should join the soccer team.
- ☐ 3. Nico seems to have a lot of headaches.
- ☐ 4. You'd better talk to your doctor about your headaches.
- ☐ 5. You had better not run 10 kilometers every day.
- ☐ 6. My brother used to run a lot, and now he has problems with his knees.

LANGUAGE FOR WRITING Using Modals of Advice

We use *should* to give advice.

You **should** exercise a few times a week.

You **shouldn't** eat pizza every day.

We can add *probably* to soften the advice or *really* to strengthen it.

You **probably** shouldn't eat pizza every day. (*softer advice*)

You **really** shouldn't eat pizza every day. (*stronger advice*)

We use *had better* to give very strong advice or a warning. We use *had better not* to show that there may be serious problems if the advice is not taken. We don't usually use words like *probably* and *really* with *had better*.

You **had better** see a doctor about your headaches.

You **had better not** ride your bicycle without a helmet.

B APPLY Complete each sentence with *should* or *shouldn't* and the verb in parentheses.

1. You _____ (walk) around the block during lunch to get a little exercise.
2. You really _____ (stop) drinking 10 sodas a day. It's very bad for your health!
3. You really _____ (stay up) late tonight. You have to get up at 5:30.
4. You really _____ (go out) tonight if you have an exam tomorrow.
5. Mike's really good at tennis. He _____ (join) the tennis team.

- **C APPLY** Choose the three sentences in Exercise B that can also use *had better* or *had better not*. Then rewrite the sentences with *had better* or *had better not*.

1. _____

2. _____

3. _____

- **D APPLY** Read these two messages sent to an advice blog. Using *should* or *shouldn't*, write two sentences of advice to each person.

1. "I like to stay up late playing video games, but I have classes in the mornings. I have a hard time waking up, and I'm always tired during the day. What should I do?"

2. "I really want to start getting more exercise, but I don't want to do typical types of exercise like running or swimming. Do you have any suggestions for me?"

Review the
Reading Skill
in Unit 5.

WRITING SKILL Introducing Examples

Writers often use examples to give information about their supporting ideas. Here are some ways to introduce examples:

Introducing one example:

For example, ...

To give an example, ...

For instance, ...

Introducing several examples:

To give some examples, ...

Some examples include ...

Introducing a type of example using an adjective:

*... a **great** example ...*

*... another **good** example ...*

*To give a **recent** example, ...*

Note: In Units 2 and 3, you learned how to order and connect supporting ideas in a paragraph using *also*, *in addition*, and *finally*. You can use these connecting words and the phrases in this unit to organize your supporting ideas and examples.

- E Read the paragraph below. Choose the correct words or phrases to link supporting ideas or introduce examples.

My family has a history of heart disease, so I make sure that I have a very healthy diet.

¹**First of all, / In addition,** I eat a lot of fruit and vegetables. ²**For example, / Also,** I always have a salad for lunch and some fruit for breakfast. ³**To give an example, / Second,** I don't eat foods with a lot of sugar, ⁴**in addition / such as** cookies and cakes. ⁵**Next, / Finally,** I don't eat greasy food. ⁶**For instance, / Another good example,** I never eat foods like fried chicken or French fries.

- F Complete the paragraph with the phrases in the box. Use each phrase once.

For instance

A great example

To give some examples

I wanted to start a new exercise routine, so I thought about what kind of exercise would be right for me. First, I realized that I like to exercise with other people. ¹_____ I like to go to yoga classes and go hiking with friends. Also, I know that I prefer to exercise in the evening. ²_____ I like to go to the gym after dinner. Finally, I want to do something that I really enjoy. ³_____ is playing team sports. So I decided to join a basketball team. We play after work three days a week.

- G Imagine that someone wants to improve their writing skills in English. Complete the pairs of sentences to provide advice and examples.

1. You really should _____

_____.

For instance, _____

_____.

2. You probably should not _____

_____.

To give some examples, _____

_____.

3. Finally, you had better _____

_____.

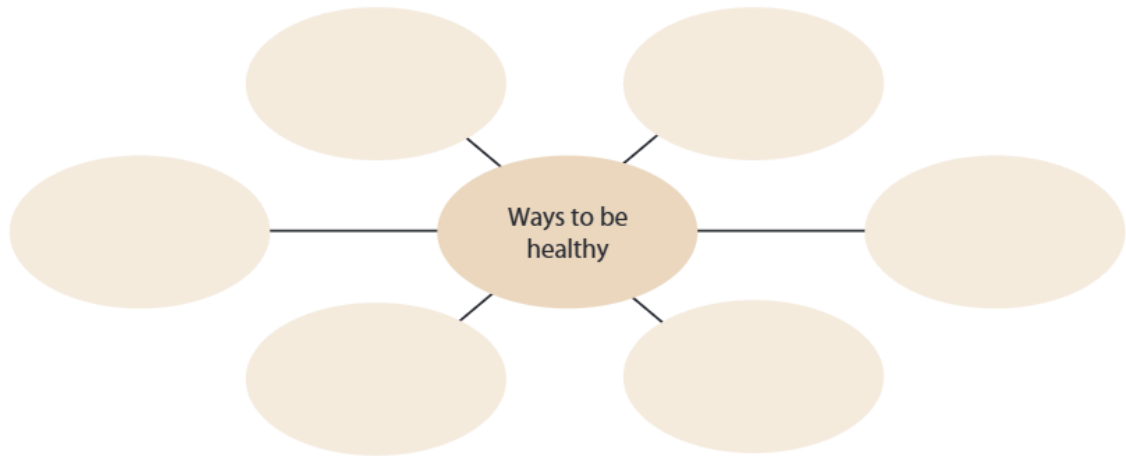

For example, _____

_____.

WRITING TASK

GOAL You are going to write a **paragraph** on the following topic:
What should someone do to stay healthy?

- A BRAINSTORM** Note down activities and habits that someone can do to stay healthy. Then share your ideas with a partner.

- B WRITE DETAILS** Look back at your notes in Exercise A. Choose the three activities or habits you want to write about. Then write one example for each.

- C PLAN** Use the information above to complete an outline for your paragraph.

OUTLINE

Topic: Things that someone should do to get healthy and stay healthy

Topic Sentence: _____

Supporting Idea (Activity/Habit 1): _____

Example: _____

Supporting Idea (Activity/Habit 2): _____

Example: _____

Supporting Idea (Activity/Habit 3): _____

Example: _____

- D FIRST DRAFT** Use the information in your outline to write a first draft of your paragraph. Use modals of advice. Refer to the writing model below to help you.

WRITING MODEL

This model paragraph is similar to the one you are going to write. It is on the topic of how to be successful at work.

There are several ways to be successful in your job. First, you should manage your time well. In particular, you shouldn't arrive late to work and you probably shouldn't leave early. In addition, you should be willing to learn new skills. For example, you should take on new tasks and projects. Finally, you should be professional. For instance, you really shouldn't gossip or say negative things about your co-workers.

- E USE PRONOUNS** Look at your first draft. Find words that you repeat. Can you use pronouns to avoid repetition?

Review
this Writing
Skill in
Unit 6.

- F REVISED DRAFT** Now use the questions below to revise your paragraph.

- ☐ 1. Are all your sentences about ways to stay healthy?
- ☐ 2. Did you include three supporting ideas?
- ☐ 3. Did you include at least one example for each supporting idea?
- ☐ 4. Did you use modals of advice correctly?

- G FINAL DRAFT** Follow these steps to write a final draft.

1. Check your revised draft for mistakes with modals of advice.
2. Now use the checklist on page 203 to write a final draft. Make any other necessary changes.
3. Work in pairs and read your partner's final draft. Give feedback on each other's paragraphs.

A hiker enjoys a
walk in nature
